Introduction and preliminary remarks

The **GESIS Variable Report Series** on the **International Social Survey Programme Studies** offers a comprehensive description of data on study and variable level. For each annual module as well as for the cumulated data sets individual Variable Reports are provided.

The reports are structured into six chapters:
Chapter one gives a brief overview of the worldwide ISSP project as a whole.
Chapter two provides the description of the respective ISSP study including bibliographic information, abstract and methodological specifications.
Chapter three contains information on study related survey materials which are absolutely essential to understand the data properly, followed by general information about the structure of ISSP data sets, documentation standards and variable coding frames in **chapter four**.
Chapter five provides a short explanation of the variable documentation itself.
Chapter six contains the core variable documentation: the documentation of each variable including complete question texts with all answer categories of the Basic Questionnaire enriched with archival remarks. In addition, this Variable Report presents cross tabulations over countries for all substantial and most of the demographic variables. Archive, protocol and country specific variables are usually shown by frequency distributions. All cross tabulations and frequency distributions are based on unweighted data.

The appendix usually contains two sorts of survey materials: the Study Descriptions and, if available, the Characteristics of National Population, basic statistics for all the participating countries of the corresponding module. The data for the annual ISSP modules are collected by independent institutions in each country. The country data is integrated into one international data file, which is documented, distributed and long-term archived by the ISSP Archive, institutionally, the GESIS Data Archive for the Social Sciences (Leibniz Institute for the Social Sciences) in Cologne, Germany (http://www.gesis.org). In every second year from 1997 on, data and documentation have predominantly been prepared by our partners at JDS/ ASEP in Spain (http://www.jdsurvey.com).

Data access

Data for statistical analysis and related documentation are made available by the Data Catalogue (https://dbk.gesis.org/dbksearch/) or by ZACAT (http://zacat.gesis.org), the Data Online Platform of GESIS. ZACAT additionally enables users to analyse data online. Access to the Data Catalogue and ZACAT is free of charge, download of data sets requires registration.

Anonymised data

According to data regulations in participating countries, only anonymised data are made available. Each national team is responsible for carefully checking the data in this respect before the deposit.

Usage requirements

To provide funding agencies with essential information about the use of archival resources and to facilitate the exchange of information about related research activities, all users of ISSP data are requested to send bibliographic citations for each completed manuscript or thesis abstracts to isspservice@gesis.org or if possible, please directly send a copy of the publication to GESIS (GESIS-Leibniz-Institute for the Social Sciences, Dept. Data Archive - ISSP, Unter Sachsenhausen 6-8, D-50667 Cologne, Germany). Please also observe the general notes on the usage regulations of GESIS Data Archive resources (http://www.gesis.org/en/services/data-analysis/data-archive-service/usage-regulations/).

Disclaimer

Neither the original collector of the data, nor GESIS or JDS/ ASEP bears any responsibility for the use of ISSP data or any data analyses.

1 ISSP Series Description

1.1 Series name

The International Social Survey Programme (ISSP)

1.2 Series information

The ISSP is a cross-national collaboration programme, which has been continuously conducting annual surveys on diverse social science topics since 1985. The topics for each ISSP survey are proposed by delegates from ISSP member countries. Then, a Basic Questionnaire is composed and improved over several years by a committee, elected by the General Assembly before it is pretested in various countries. Starting in 1984 with four founding nations - Australia, Germany, Great Britain and the United States, the ISSP meanwhile has grown up to almost 50 member countries covering various cultures around the globe.

ISSP Modules 1985 – 2015:

- Citizenship: 2004/ 2014
- Environment: 1993/ 2000/ 2010
- Family and Changing Gender Roles: 1988/ 1994/ 2002/ 2012
- Health and Health Care: 2011
- Leisure Time and Sports: 2007
- National Identity: 1995/ 2003/ 2013
- Religion: 1991/ 1998/ 2008
- Role of Government: 1985/ 1990/ 1996/ 2006
- Social Inequality: 1987/ 1992/ 1999/ 2009
- Social Networks: 1986/ 2001 (Social Relations and Support Systems)
- Work Orientations: 1989/ 1997/ 2005/ 2015

All ISSP members agree
1. to jointly develop modules addressing important areas of social science,
2. to field the modules either as an individual survey or as supplements to the regular national surveys and
3. to make the data available to the social science community as quickly as possible.

As the surveys are designed for replication they offer both cross-national and cross-time comparison, creating the base for a vast range of substantive and methodological research. Since there is no external fund agency, ISSP members fund their own surveys. Beyond that, ISSP committee members fund ISSP central coordination, networking, development of source questionnaires, or methodological work.

For more information on the ISSP in general, its working principles, contact addresses of ISSP members and principal investigators, please visit the ISSP web site (http://www.issp.org).

2 Study Description – International Social Survey Programme 2003

2.1 Bibliographic information

2.1.1 Archive study number

GESIS: ZA3910

2.1.2 Title

International Social Survey Programme: National Identity II - ISSP 2003

2.1.3 Authoring Entity/ Principal Investigators

Name	Affiliation
Gibson, Rachel K.	ACSPRI Centre for Social Research (ACSR) Research School of Social Sciences Canberra, The Australian National University, Australia

2.1.4 Bibliographic citation

Publications based on ISSP data, which are made available through GESIS, should acknowledge those sources by means of bibliographic citations. To ensure that such source attributions are captured for social science bibliographic utilities, citations should appear in footnotes or in the reference section of publications.

How to cite the data: ISSP Research Group (2012): International Social Survey Programme: National Identity II - ISSP 2003. GESIS Data Archive, Cologne. ZA3910 Data file Version 2.1.0, doi: 10.4232/1.11449

2.2 Content

2.2.1 Abstract

Questions on national consciousness and national identity.

2.2.2 Topic classification

Topics: Identification with the town, the city, the region, the nation and with the respective continent; most important characteristics for national identity; identification with one´s own nation and national pride (scale); perceived pride in the democracy of the country, the political influence of the country in the world, the economic achievement, the social security system, the scientific achievements, the achievements in sports, the achievements in arts or literature, the armed forces, the history and equal rights of all social groups in society; preference for protective duty to support the national economy; attitude to the right of international institutions to enforce solutions to be accepted nationally; attitude to enforcing national interests regardless of evoking conflicts with other countries; rejection of acquisition of land by foreigners in one´s country; reference for national films in national television stations; damage done by large international companies to the local business; attitude to free trade; attitude to follow the decisions of international organisations even if the local government does not agree with them; international organisations take away too much power from the country; availability of worldwide information as a benefit of the internet; importance of sharing national customs and traditions to achieve full nationality; attitude to government support of national minorities to preserve their customs and habits; preference for assimilation of minorities or retention of their identity; hostility to foreigners and prejudices against immigrants (scale); attitude to a reduction of immigration of foreigners; respondents citizenship; citizenship of parents at birth of respondent; birthplace or citizenship of parents should allow naturalization of children; same rights for citizens and legal immigrants; attitude towards stronger measures regarding illegal immigrants; languages spoken at home; perceived ethnic affiliation and strength of this feeling.

Additional questions in EU states: Advantageousness of membership of the country in the EU; benefits from EU-membership; attitude towards a powerful EU-government.

Demography: Sex; age; marital status; steady life-partner; years in school, current employment status; current employment status of spouse; hours worked weekly; occupation of respondent and spouse (ISCO-88); respondent and spouse working for private, public sector or self-employed; supervisor function; union membership; household size; family income; respondents earnings; household composition; self-placement on a left-right continuum; party preference; vote last election; religious denomination; frequency of church attendance; self-placement on a top-bottom scale; region; town size, rural or urban region; ethnicity or nationality.

Additionally encoded: Mode of data-collection.

2.3 Geographic Coverage

Australia (AU); Austria (AT); Bulgaria (BG); Canada (CA); Switzerland (CH); Chile (CL); Czech Republic (CZ); Denmark (DK); Spain (ES); Finland (FI); France (FR); Germany (DE); Great Britain (GB-GBN); Hungary (HU); Ireland

(IE); Israel (IL); Japan (JP); Korea (South), Republic of (KR); Latvia (LV); Netherlands (NL); Norway (NO); New Zealand (NZ); Philippines (PH); Poland (PL); Portugal (PT); Russian Federation (RU); Sweden (SE); Slovenia (SI); Slovakia (SK); Taiwan (TW); United States (US); Uruguay (UY); Venezuela, Bolivarian Republic of (VE); South Africa (ZA)

2.4 Universe

18 years old (exclusions: Finland: 15; Japan, Netherlands, Russia and South Africa: 16; Sweden: 17) and older

2.5 Selection method

Sampling procedures differ for the individual countries: Partly simple, partly multi-stage stratified random sample

2.6 Fieldwork and sample sizes

Table: Participating countries (regions) and fieldwork information for ISSP 2003

Country (Region)	ISO	Fieldwork start/ end	Fieldwork Institute	Questionnaire-versions	Sample Size (n of cases)
Australia	AU	Aug 03 – Dec 03	Australian Social Science Data Archive, Australia	AU03	2183
Austria	AT	Nov 04 – Dec 04	Institute for Empirical Social Research (IFES), Vienna, Austria	AT03	1006

Total Sample Size	**∑**	**Feb 04 – Mar 05**			**45993**

2.7 Mode of data collection

Oral, paper and pencil respectively postal interview with standardised questionnaire

3 Corresponding survey material

When dealing with international comparative data, data sets and documentation must be seen as two sides of the same coin. Even though ISSP members make huge efforts to produce comparable data in each country, there still remains a remarkable amount of country specific peculiarities in the contributions to the final, international data set. These country specific peculiarities either have to be harmonised or to be documented, as they provide vital information for secondary analysts. Therefore, a set of procedures has been developed to take care for orderly technical preparation of national data sets and to allow for the systematic collection of required context information.

All corresponding survey materials are provided in English, only the national questionnaires are available in the national language(s) of each country.

3.1 Basic Questionnaire

The ISSP General Assembly concludes the design phase of an ISSP module after intensive discussions on the single items of the Basic Questionnaire roughly a year before the module is fielded. Two third of the module questions have to be replications from previous ISSP modules of the same subject. According to this, one third of the questions in each module are new. Subsequent to the mandatory module questions, some pre-selected optional questions can be added. Finally, ISSP member countries translate the British English Basic Questionnaire to their local language as equivalent as possible.

Drafting group for the Basic Questionnaire on the National Identity Module 2003:

- Spain: Juan Díez-Medrano (Convenor)
- United States: Tom W. Smith (Convenor)
- Brazil
- Bulgaria
- Great Britain
- Hungary
- Norway

3.2 Background Variables Standards and Documentation

Apart from the Basic Questionnaire, covering the substantial module variables, countries also have to collect responses on a defined set of ISSP Standard Background Variables, which predominantly contains demographic information. Since the ISSP often runs with larger national surveys, the background variables are mainly taken from these surveys. Thus, demographic issues cannot be asked in a fixed form over all members of the ISSP. They have to meet the demands of the national studies first. As a result, the demographic variables for the ISSP need to be post-harmonised according to a developed set of common standards.

Over the past 30 years, there have been different Background Variable Standards:
The first set of background variables was established in 1985 with the first ISSP survey. Here countries agreed on collecting the same demographic information. This list of variables underwent a revision in 2001, now providing a coding frame for each background variable. It was valid until 2009.
In 2010 a new revision process of the ISSP Background Variables, planned for a three years period, started. Beginning with the ISSP module 2010, this first revised version of the ISSP Background Variable Standard concentrating mainly on variables containing work, occupational and partnership status information came into effect. The second round of revisions, coming into effect in 2011, had its focus on the education variables, while the last change is going to be made on the variable measuring ethnicity, effective with the module 2013. The new standard is documented in some guidelines (different documents indicating the intermediate steps of revision), providing detailed information and instructions on the variables measurement goals, coding frames,

filters and possible question texts. Additionally, the question texts are summarised in a Master Questionnaire on Background Variables.

Since 2004 countries document the post-harmonisation processes for each variable in a special documentation template provided by the Archive. This template, always adjusted to the current standard, offers detailed country specific information on administration, derivation, and coding of the ISSP Background Variables.
All relevant background variable documents are available under the following link:
http://www.gesis.org/en/issp/issp-members-area/coding-standards/

3.3 National Study Description

For each country, the original National Study Description is available in the appendix of this Variable Report. The National Study Descriptions are provided by the countries and include information on sample sizes, field dates, modes of data collection, sampling procedures, response rates and weighting processes.

3.4 Characteristics of National Population

The appendix of this Variable Report also includes Characteristics of National Populations for all participating countries from 1989 on. These documents provide statistical data on the composition of national populations in terms of gender, age, education and employment rates and, therefore, allow assessing how representative national samples are.

3.5 Where to find the survey materials and the data set of the ISSP Module of 2003 – National Identity II

In the GESIS Data Catalogue on the GESIS web you find

- the **Basic Questionnaire** of this module together with
- all **country questionnaires** in the respective local languages,
- the **Codebook** (Variable Report) with the **National Study Descriptions and the Characteristics of National Populations** in its appendix
- the **Study Monitoring Report** and
- the **integrated data file ZA3910_v2.1.0** for download

under the tab "Data and Documents" of:

https://dbk.gesis.org/dbksearch/SDesc2.asp?no=3910

The GESIS online data portal ZACAT also provides the integrated data file and further ISSP documentation materials for download:

http://zacat.gesis.org/webview/index.jsp?object=http://zacat.gesis.org/obj/fStudy/ZA3910

Beyond this, ZACAT enables users to perform basic online analyses like frequency distributions, cross tabulations or regressions.

4 Data set structure and standards

ISSP data sets are processed and documented by the Data Archive of GESIS and by ASEP/ JDS every second year in accordance with agreed standards, which may differ in some details. Despite several changes in the background variables, a certain standard has been established in the course of time.

In order to uniquely identify a data set, to each data set version a GESIS Study No., a Version No., and a Digital Object Identifier (doi) is assigned. The doi is linked to the Study Description in the Data Catalogue (https://dbk.gesis.org/dbksearch/index.asp). Metadata filled in the Study Description of ISSP 2003 data and associated with a doi are provided to the registration agency for social science data (da|ra).

The doi: 10.4232/1.11449 is assigned to the ISSP 2003 (v.2.1.0).

4.1 Data set structure

Usually, the ISSP data sets are structured as follows:

1. Archive and Identification Variables

   Administrative variables are used for identifying data sets, respondents and countries (GESIS Data Archive Study Number, Version Number, Respondent Number, Country Codes).
   The GESIS Archive version variable includes the number of the data set and the respective release date, composed as a string variable with three numbers:

   - The major number is incremented when there are changes in the composition of the data set (e.g. additional variables or cases).
   - The minor or second number is incremented when significant errors have been fixed (e.g. coding errors, misleading value labels).
   -The third or revision number is incremented when minor bugs are fixed (e.g. spelling errors in variable or value labels).

   Country codes identify each case as belonging to one country. The country code variable, which was used according to a scheme leaning on international automobile identification codes in the beginning of the ISSP, was replaced by two country code variables based on the ISO Code 3166. One identifies countries as a whole, the other one possible subsamples, such as East and West Germany. The cross tabulations shown in this Variable Report are based on a third, alphanumerical country code variable, which also identifies subsamples.

2. Substantial Variables

   The substantial variables contain the mandatory module questions, often supplemented by optional questions.

   Variable labels provide keywords based on the question text; these keywords are applied consistently if questions or question items are repeated over time. All substantial variables include the original question number of the Basic Questionnaire in the variable labels.
   Generally, all variable names consist of the standard prefix 'V' and the consecutive variable number (beginning with the archive variables).

3. ISSP Background Variables

   In the earlier ISSP modules, all variables are numbered consecutively, beginning with the archive variables and followed by substantial and background variables. The last variable of each data set

usually is the variable on weighting. Later on, the background variables start with V200 et seq.. Nowadays, these variable numbers are expressed by mnemonics with max. 8 characters (SEX, AGE, ...).

4. Country Specific Variables

   Variables, which cannot be harmonised for various reasons, are usually presented as country specific variables. As a rule, variable names of country specific variables have country abbreviations as prefixes. In some of the older ISSP studies, the principle of country specific variables is not used. Instead all country specific information is integrated into one variable. This Variable Report provides careful documentation of country specific meanings and deviations.

5. Protocol Variables

   There are two protocol variables in the latest ISSP modules. The first, 'MODE', indicates the mode of data collection, while the second, 'SUBSCASE', indicates whether a respondent in the sample is an original case or a replacement for an originally selected respondent who was not available. Former ISSP surveys do not contain the SUBSCASE variable.

6. Weight

   There is no weight available for the international comparison on the ISSP across countries.
   Please note that also country subsamples can be over- respectively underrepresented without any weighting factor correcting for the imbalance. This fact has to be taken into account if these countries in question are analysed as one unit.

4.1.1 Deviating data set structure in ZA3910

In this data set there are two variables for country identification basing on ISO 3166, the former variable V3, now 'COUNTRY', and the new alphanumerical country code variable 'C_ALPHAN'. 'COUNTRY' provides country codes that due to the enclosure of these codes in the respondents' ID numbers help to uniquely identify respondents. 'C_ALPHAN' is used for the cross tabulations shown in this Variable Report. Usually, both variables identify subsamples.

The ISSP background variables are already expressed by the current mnemonics (SEX, AGE, AT_DEGR ...). The variables on respondents' income (RINCOME) and family income (INCOME) are not available as country specific variables. However, the exact meaning of country specific income categories and midpoints are carefully documented so long as they were provided by the principal investigators. Please note, that in some countries personal income (RINCOME) and family income (INCOME) might differ slightly only because of different category schemes in between these two variables which finally leads to deviating midpoints (e.g. Czech Republic or New Zealand). Additionally, there are two compressed variables on occupation (ISCO88_1, SPIS88_1), that provide main groups of the occupational codes of ISCO 1988.

4.2 Data preparation

On the basis of the Basic Questionnaire covering the substantial variables and the standard core set of background variables the Archive provides a Standard Setup for each individual ISSP module, which defines the variable and value labels for the integrated data file. All country data sets should be processed and prepared to match the structure of the Standard Setup before the material is deposited to the GESIS Data Archive for integration and archiving.

After conducting the national surveys, all collaborators are supposed to deposit their data at the GESIS Data Archive, where all the deposited data sets are prepared, integrated and merged into one single international data set, which is finally published.

During the data preparation process all national data sets are successively controlled for completeness, missing and duplicate records, for wild codes and for formal consistency of response patterns and question routing. Moreover, national derivation processes from source to target codes in the background variables are controlled. Missing values, especially due to filter instructions are checked and recoded where necessary. Errors, which are discovered during these procedures, are corrected or documented in cooperation with primary investigators. Complete machine-readable DDI-XML (see chapter 4.5) compliant documentation is created for all ISSP data sets by GESIS.

4.3 Coding frames

By general rule, the variables of the module questions adopt the coding frame as specified in the Basic Questionnaire, except for multiple response questions.

GESIS adds 'Not applicable' (NAP) codes for questions that have filters. NAP indicates that only a subsample and not all of the respondents were asked. Also in the case of country specific variables, all the other countries are coded NAP.

GESIS adds 'Not available' (NAV) for variables which in single countries may not have been conducted for whatever reason.

4.3.1 Country specific answer categories

ISSP data include some questions (variables) which have country specific answer categories such as DEGREE, RESPONDENT'S INCOME, FAMILY INCOME, PARTY AFFILIATION, REGION and SIZE OF COMMUNITY.
For country specific income variables with answer categories, the data is recoded to midpoints of the categories.

For occupation, official international occupation codes are used. While in the first years of the ISSP many countries used country specific occupation codes, ISCO 1988 has been established as a standard over the years.

4.3.2 Missing values

In general, the missing values are standardised across ISSP modules. For all variables a set of missing values is defined:

0: Not applicable (NAP), Not available (NAV)
7 (97, 997, 9997, ...): Refused
8 (98,998, 9998, ...): Don't know
9 (99, 999,9999, ...): No answer

4.4 Weighting

Please note, that there is **no total weight usable for international comparison**. While all ISSP data sets contain a weighting variable, the weights in this variable do not incorporate a common weighting scheme that can be applied to all countries of the same ISSP module.
In the Study Description and/ or in the Background Variables Documentation of each country you will find more detailed information on the kind of weights that are used. You can see, whether

- a design weight
- weights to adjust for non-response bias or
- a combination of these both weights above or

- different weighting procedures

are applied. However, some countries dispense with weighting factors. If no weight is provided, the variable "Weight" is coded to 1.0. Otherwise the weighting factor is unequal 1.0 (but greater than 0).

It may be advisable to weight data to increase representativeness in certain cases. For ISSP data we strongly recommend consulting the National Study Descriptions for information on the certain weighting factor composition and maybe even the Characteristics of National Population for more context information. An initial overview of the national weighting procedures is provided in this Variable Report in chapter 6.

4.5 International documentation standard

The variable documentation is set up in accordance with the international metadata specifications for the social sciences, established by the Data Documentation Initiative <DDI>. The Variable Reports are based on the XML representation of DDI version 2. The documentation combines the exact wording and sequence of question components (question text, interviewer instruction, response categories, etc.) from the Basic Questionnaire with the variable description (variable name, values, and labels) of the data set. General remarks and comments referring to a certain variable are defined as variable notes. Notes mostly include additional information on country specific deviations from the ISSP standard, information about data problems or other specific characteristics.

5 Explanation of the variable documentation

The variable documentation part of this Variable Report describes each variable in the data file including all relevant information for this variable such as the single question components or further notes and frequency distributions. The variable documentation is set up by means of the GESIS Dataset Documentation Manager (DSDM) and in accordance with international metadata standards (DDI-Codebook/XML).
In general, the following abbreviations are used to indicate countries or (sub-national) areas. As far as applicable, the ISO 3166-1 alpha-2 country codes have been applied and coded accordingly in the alphanumeric sample identification variable 'C_ALPHAN'.

AT	Austria	JP	Japan
AU	Australia	KR	Korea (South)
BG	Bulgaria	LV	Latvia
CA	Canada	NL	Netherlands
CH	Switzerland	NO	Norway
CL	Chile	NZ	New Zealand
CZ	Czech Republic	PH	Philippines
DE-E	Germany-East	PL	Poland
DE-W	Germany-West	PT	Portugal
DK	Denmark	RU	Russia
ES	Spain	SE	Sweden
FI	Finland	SI	Slovenia
FR	France	SK	Slovakia
GB-GBN	Great Britain	TW	Taiwan
HU	Hungary	US	United States
IE	Ireland	UY	Uruguay
IL-A	Israel, Arabs	VE	Venezuela
IL-J	Israel, Jews	ZA	South Africa

The example explained below (ISSP 2008) shows the information appearing in the variable documentation part of a Variable Report for a typical substantial variable. Results are usually broken down by country or presented as frequency counts in the case of country specific variables. In the case of variables with long lists of coded “real” values (e.g. age) results are not shown.

The complete question and answer texts are taken from the final Basic Questionnaire as provided.
All deviations are documented in this Variable Report.

As there is neither an international weighting factor nor a national weighting factor which would be comparable for all participating countries, all frequencies and tables are calculated from **unweighted data.**

Header with DIGITAL OBJECT IDENTIFIER (DOI) linked to the Study Description in the GESIS Data Catalogue.

VARIABLE NAME (serial number assigned by the archive) and VARIABLE LABEL as defined in the data set.

QUESTION NUMBER and full QUESTION TEXT from the Basic Questionnaire, including interviewer instructions, if applicable. The numbers or letters that may appear together with the original question number, reflect the item order (multiple item or multiple response questions) or indicate if a question was asked only in a single country (country abbreviation).

CODE VALUES occurring in the data for this variable and complete ANSWER TEXT from the Basic Questionnaire. Abbreviations commonly used in the code definitions are DK (don't know), NA (no answer), NAP (not applicable) and NAV (not available).

DERIVATION information refers to the construction principle of derived variables.
NOTE delineates additional explanatory text or archive remarks on data processing and other issues relevant for the understanding or application of the variable.

CROSS-TABULATION: The absolute frequencies base on unweighted data. The relative frequencies (*row percent*) refer to the valid cases (*n valid sum*), i.e. the total number of cases (*n sum*) reduced by the number of cases defined as missing data (*M*).

FREQUENCY COUNTS: For country specific variables relative frequencies are calculated in- and excluding missing data (*M*), i.e. *percent* on the basis of all cases (*sum*) and *valid percent* on basis of the *valid cases*.

ISSP 2008 – Religion III

GESIS Study No. 4950 (v2.2.0), http://dx.doi.org/doi:10.4232/1.11334

V34 – Q17 Best describes beliefs about God

Q.17
Which best describes your beliefs about God?

1 I don't believe in God now and I never have
2 I don't believe in God now, but I used to
3 I believe in God now, but I didn't use to
4 I believe in God now and I always have
8 Can't choose
9 No answer

6 Variable Documentation

Variable, Label

Question Text (English Language)

V1 - GESIS Data Archive Study Number

GESIS Data Archive Study Number ZA3910 for the ISSP 2003 on 'National Identity II".

Study number of the data set producer and archiving number

3910 GESIS Data Archive Study Number

V1

Value	Label	Missing	Count	Percent	Valid Percent
3910	GESIS Data Archive Study Number		45993	100.0	100.0
	Sum		45993	100.0	100.0
	Valid Cases		45993		

V2 - GESIS Archive Version

Version and release date of the Archive Data Set

This variable identifies the GESIS archive version number of this data set and the corresponding release date, recorded as a string.

The version number is composed of a sequence of three numbers. The major number is incremented when there are changes in the composition of the data set (e.g. additional variables or cases), the minor or second number is incremented when significant errors have been fixed (e.g. coding errors, misleading value labels), and the third or revision number is incremented when minor bugs are fixed (e.g. spelling errors in variable or value labels).

V2

Value	Label	Missing	Count	Percent	Valid Percent
2.1.0 (2012-10-18)			45993	100.0	100.0
	Sum		45993	100.0	100.0
	Valid Cases		45993		

V3 - Respondent Number

Respondent Identification Number

This number uniquely identifies each respondent. It is composed of two sections containing eight numbers in total. The first two digits are identical with the country codes (01-43) of variable 'COUNTRY'. The digits following behind contain the original identification number.

COUNTRY - Country/ Sample (ISO 3166)

Country/ Sample (ISO 3166)

This variable holds the country codes for the participating countries. Since these country codes are a mere enumneration, the codes/ values themselves do not contain ISO 3166 information. Although the country abreviations used in the value labels are closely adjusted to ISO 3166. For more information regarding this ISO standard, please see variable C_ALPHAN.

The country codes are incorporated in variable V3, Respondent Number.

C_ALPHAN - Sample Prefix ISO 3166 Code - alphanumeric

ISO 3166 Country/ Sample Prefix

This alphanumerical sample identification variable C_ALPHAN includes country codes that are based on ISO 3166.

All countries are coded in accordance with the ISO 3166-1-alpha-2 country code, if available. For Great Britain ISO 3166-2 is applied. No ISO standard codes are available for the "historical" East/ West subdivision of Germany (DE-E/ DE-W) and for the subsamples of Israel (IL-A, Arabs and IL-J, Jews).

This variable is used for the cross tabulations shown in the Variable Report.

V4 - Q1a Most important group R identifies with

Q.1
We are all part of different groups. Some are more important to us than others when we think of ourselves. In general, which in the following list is most important to you in describing who you are? and the second most important? and the third most important?
(Deviation in oral interviews: Use card with choices)

Q.1a First most important.

1 Your current or previous occupation (or being a homemaker)
2 Your race/ethnic background
3 Your gender (that is, being a man/woman)
4 Your age group (that is, Young, Middle, Age, Old)
5 Your religion (or being agnostic or atheist)
6 Your preferred political party, group, or movement.
7 Your nationality
8 Your family or marital status (that is, son/daughter, mother/father, grandfather/grandmother, husband/wife, widower/widow, nor married, or other similar)
9 Your social class (that is upper, middle, lower, working, or similar categories)
10 The part of [COUNTRY] that you live in
98 Can't choose
99 No answer, refused

in Spain (ES):
11 None

Note:
Hungary (HU): Did not include code 7
South Korea (KR): Did not include code 2

V5 - Q1b Second most important group R identifies with

Q.1
We are all part of different groups. Some are more important to us than others when we think of ourselves. In general, which in the following list is most important to you in describing who you are? and the second most important? and the third most important?
(Deviation in oral interviews: Use card with choices)

Q.1b Second most important

1 Your current or previous occupation (or being a homemaker)
2 Your race/ethnic background
3 Your gender (that is, being a man/woman)
4 Your age group (that is, Young, Middle, Age, Old)
5 Your religion (or being agnostic or atheist)
6 Your preferred political party, group, or movement.
7 Your nationality
8 Your family or marital status (that is, son/daughter, mother/father, grandfather/grandmother, husband/wife, widower/widow, nor married, or other similar)
9 Your social class (that is upper, middle, lower, working, or similar categories)
10 The part of [COUNTRY] that you live in
98 Can't choose
99 No answer, refused

in Spain (ES):
11 None

Note:
Hungary (HU): Did not include code 7
South Korea (KR): Did not include code 2

V6 - Q1c Third most important group R identifies with

Q.1
We are all part of different groups. Some are more important to us than others when we think of ourselves. In general, which in the following list is most important to you in describing who you are? and the second most important? and the third most important?
(Deviation in oral interviews: Use card with choices)

Q.1c Third most important

1 Your current or previous occupation (or being a homemaker)
2 Your race/ethnic background
3 Your gender (that is, being a man/woman)
4 Your age group (that is, Young, Middle, Age, Old)
5 Your religion (or being agnostic or atheist)
6 Your preferred political party, group, or movement.
7 Your nationality
8 Your family or marital status (that is, son/daughter, mother/father, grandfather/grandmother, husband/wife, widower/widow, nor married, or other similar)
9 Your social class (that is upper, middle, lower, working, or similar categories)
10 The part of [COUNTRY] that you live in
98 Can't choose
99 No answer, refused

in Spain (ES):
11 None

Note:
Hungary (HU): Did not include code 7
South Korea (KR): Did not include code 2

V13 - Q3c Important: To have lived in [Country] for most of one’s life

Q.3
Some people say that the following things are important for being truly [NATIONALITY]. Others say they are not important. How important do you think each of the following is...
(Please, tick one box on each line)

Q.3c To have lived in [COUNTRY] for most of one's life

1 Very important
2 Fairly important
3 Not very important
4 Not important at all
8 Can't choose
9 No answer, refused

Note:
Precode: "truly [NATIONALITY]" E.g. "truly British", American "a true American"

V20 - Q4b There are some things about [Country] today that make me feel ashamed of [Country]

Q.4
How much do you agree or disagree with the following statements?
(Please, tick one box on each line)

Q.4b There are some things about [COUNTRY] today that make me feel ashamed of [COUNTRY]

1 Agree strongly
2 Agree
3 Neither agree nor disagree
4 Disagree
5 Disagree strongly
8 Can't choose
9 No answer, refused

V49 - Q9 Help minorities to preserve traditions

Q.9

Some people say that it is better for a country if different racial and ethnic groups maintain their distinct customs and traditions. Others say that it is better if these groups adapt and blend into the larger society. Which of these views comes closer to your own?

1 It is better for society if groups maintain their distinct customs and traditions
2 It is better if groups adapt and blend into the larger society
8 Don't know
9 No answer, refused

V68 - Q19b R: More regional or national identity

Q.19b
Some people think of themselves first as [COUNTRY NATIONALITY]. Others may think of themselves first as [REGION].
Which if any, of the following best describes how you see yourself?
["Region" should be replaced by the appropriate subnational category in each COUNTRY (e.g. "Scotland" in Britain; "Catalonia" in Spain)]

1 Only [regional identity]
2 More [regional identity] than [COUNTRY NATIONALITY]
3 As [regional identity] as [COUNTRY NATIONALITY]
4 More [COUNTRY NATIONALITY] than [regional identity]
5 Only [COUNTRY NATIONALITY]
6 Other
7 None
8 Can't choose
9 No answer, refused

in AT AU BG CA CL DE DK FI GB-GBN HU IE IL JP KR LV NL NO PH PT SE SI TW US UY VE ZA:
0 Not available/ Not asked

Note:
If it is a face-to-face interview, insert the name of the appropriate subnational unit where the interview is being conducted; if it is a self-completion questionnaire, all the relevant subnational units should be mentioned (e.g. "see themselves first as Scottish, English, or Welsh"; "see themselves as only Scottish, English, or Welsh").

EDUCYRS - R: Education I: years of schooling

Education I - years (of full time) schooling including university but not vocational training

1 1 year (Lowest value/ category)
82 82 years (Highest value/ category)
96 Still at college, uni
97 No formal school
98 Don't know
99 No answer, refused

in Australia (AU):
1 0 or 1 year

in Great Britain (GB-GBN):
94 Other answer

in Norway (NO):
9 7 to 9 years

in New Zealand (NZ):
3 1 to 3 years
8 4 to 8 years
11 9 to 11 years
13 12 to 13 years
16 14 to 16 years
18 17 and more years

in VE ZA:
0 Not available/ Not asked

90 90 and more

in South Africa (ZA):
0 Not available

ISCO88 - R: Occupation ILO,ISCO 1988 4-digit

Respondent occupation, using ISCO 1988 4-digit notation

This variable contains the International Occupation Codes of 1988 (Source: ILO/ ISCO 1988 International Standard Classification of Occupations: International Labour Office, Geneva 1991).
1, 2 and 3 digit ISCO codes are included with trailing zeros to complete four digits. In this way, some countries providing 3-digit ISCO codes only could also be included. Country specific codes were recoded to the 3 digit category to which they belong or, if it didn't exist, to the 2 or 1 digit category (for example country specific German code 7243 was recoded to 7240).

SPISCO88 - S-P: Occupation ILO,ISCO 1988 4-digit

Spouse/ partner occupation, using ISCO 1988 4-digit notation

This variable contains the International Occupation Codes of 1988 (Source: ILO/ ISCO 1988 International Standard Classification of Occupations: International Labour Office, Geneva 1991).
1, 2 and 3 digit ISCO codes are included with trailing zeros to complete four digits. In this way, some countries providing 3-digit ISCO codes only could also be included. Country specific codes were recoded to the 3 digit category to which they belong or, if it didn't exist, to the 2 or 1 digit category (for example country specific German code 7243 was recoded to 7240).

RINCOME - R: Earnings

Respondent earnings in [Country] currency

This variable is country specific, even if it is integrated in the same variable. Some countries have coded the income as midpoints of intervals that were asked to respondents. Unless specified otherwise, values are monthly incomes.
Each country provided values in their own currency. An approximate exchange rate to the Euro at the field time is given for conversion purposes only (no conversion is provided within data itself).

AT: Midpoints (Amounts in Euros)
AU: Respondent was asked for the Annual Income. Midpoints (Amounts in Australian $; 1 Australian Dollar = 0.62033 Euro)
BG: Absolute values (Amounts in Bulgarian Levs; 1 Bulgarian Lev = 0.50826 Euro)
CA: Respondent was asked for the Annual Income before taxes. Midpoints (Amounts in Canadian $; 1 Canadian Dollar = 0.68516 Euro)
CL: Midpoints (Amounts in Chilean Pesos; 1 Chilean Peso = 0.001428 Euro)
CH: Continuous values (Amounts in Swiss Francs, 1 Swiss Franc = 0.64305 Euro)
CZ: Midpoints (Amounts in Czech Crowns; 1 Czech Koruna = 0.03319 Euro)
DE-E/ DE-W: Continuous values (Amounts in Euros)
DK: Respondent were asked for total annual income. Midpoints (Amounts in Danish Crowns; 1 Danish Krone = 0.13412 Euro)
ES: Midpoints (Amounts in euros)
FI: Continuous values (Amounts in Finnish Markka; 1 Finnish Markka = 0.16819 Euro)
FR: Midpoints (Amounts in Euros)
GB-GBN: Respondent were asked for total annual income. Midpoints (Amounts in English Pounds; 1 British Pound = 1.45298 Euro)
HU: Continuous values (Amounts in Hungarian Forints; 1 Hungarian Forint = 0.004051 Euro)
IE: Respondent were asked for total annual income. Midpoints (Amounts in Euros)

INCOME - Family income

Family income in [Country] currency

This variable is country specific, even if it is integrated in the same variable. Some countries have coded the income as midpoints of intervals that were asked to respondents. Unless specified otherwise, values are monthly incomes.
Each country provided values in their own currency. An approximate exchange rate to the Euro at the field time is given for conversion purposes only (no conversion is provided within data itself).

AT: Midpoints (Amounts in Euros)
AU: Respondent was asked for the Annual Income. Midpoints (Amounts in Australian $; 1 Australian Dollar = 0.62033 Euro)
BG: Absolute values (Amounts in Bulgarian Levs; 1 Bulgarian Lev = 0.50826 Euro)
CA: Respondent was asked for the Annual Income before taxes. Midpoints (Amounts in Canadian $; 1 Canadian Dollar = 0.68516 Euro)
CH: Continuous values (Amounts in Swiss Francs, 1 Swiss Franc = 0.64305 Euro)
CL: Midpoints (Amounts in Chilean Pesos; 1 Chilean Peso = 0.001428 Euro)
CZ: Midpoints (Amounts in Czech Crowns; 1 Czech Koruna = 0.03319 Euro)
DE-E/DE-W: Continuous values (Amounts in Euros)
DK: Respondent were asked for total annual income. Midpoints (Amounts in Danish Crowns; 1 Danish Krone = 0.13412 Euro)
ES: Midpoints (Amounts in euros)
FI: Continuous values (Amounts in Finnish Markka; 1 Finnish Markka = 0.16819 Euro)
FR: Midpoints (Amounts in Euros)
GB-GBN: Respondent were asked for total annual income. Midpoints (Amounts in English Pounds; 1 British Pound = 1.45298 Euro)
HU: Continuous values (Amounts in Hungarian Forints; 1 Hungarian Forint = 0.004051 Euro)
IE: Respondent were asked for total annual income. Midpoints (Amounts in Euros)
IL: Midpoints (Amounts in Israeli Shekel; 1 Israeli New Shekel = 0.18203 Euro)
JP: Yearly income. Midpoints (Amounts in thousand Yens; 1 Japanese Yen = 0.007445 Euro)
KR: Midpoints (Amounts in thousands South Korean Won; 1 South-Korean Won = 0.0007919 Euro)
LV: Continuous values (Amounts in Lats; 1 Latvian Lats = 1.43748 Euro)
NO: Yearly income. Continuous values (Amounts in thousands Norwegian Kroner; 1 Norwegian Kroner = 0.12702 Euro)
NZ: Respondent were asked for total annual income. Midpoints (Amounts in 1 New Zealand Dollar = 0.56331 Euro)
PH: Continuous values (Amounts in Philippines Pesos ; 1 Philippine Peso = 0.01491 Euro)
PL: Continuous values (Amounts in Polish Zlotys; 1 Polish Zloty = 0.24569 Euro)
PT: Midpoints (Amounts in Euros)
RU: Continuous values (Amounts in Russian Roubles; 1 Russian Rouble = 0.02902 Euro)
SE: Continuous values per Month, pre-tax (Amounts in Swedish Krones; 1 Swedish Krona = 0.10597 Euro)
SI: Continuous values (Amounts in Slovenian Tolars; 1 Slovenian Tolar = 0.004179 Euro)
SK: Continuous values (Amounts in Slovak Koruna; 1 Slovak Koruna = 0.02581 Euro)
TW: Midpoints (values in Taiwan Dollars; 1 Taiwan Dollar = 0.02599 Euro)
US: Respondent were asked total annual income. Midpoints (Amounts in US Dollars; 1 US Dollar = 0.83507 Euro)
UY: Midpoints (Amounts in Uruguayan Pesos; 1 Uruguayan Peso = 0.03377 Euro)
VE: Continuous values (Amounts in Venezuelan Bolivar; 1 Venezuelan Bolivar = 0.0003894 Euro)
ZA: Midpoints (Amounts in Rands; 1 South African Rand = 0.12217 Euro)

HHCYCLE - Household composition:children+adults

Household composition: number of adults and of children under 18 years

1 Single household
2 1 adult, 1 child
3 1 adult, 2 children
4 1 adult, 3 or more children
5 2 adults
6 2 adults, 1 child
7 2 adults, 2 children
8 2 adults, 3 or more children
9 3 adults
10 3 adults + children
11 4 adults
12 4 adults + children
13 5 adults
14 5 adults + children
15 6 adults
16 6 adults + children
17 7 adults
18 7 adults + children
19 8 adults
20 8 adults + children
21 9 adults
22 9 adults + children
23 10 adults
24 10 adults + children
25 11 adults
26 11 adults + children
27 12 adults
28 12 adults + children
95 Otherwise

ATTEND - R: Attendance of religious services

Attendance of religious services

0 NAP: No religion (No Christian religion, religion without religious services, No answer to religious questions)
1 Several times a week
2 Once a week
3 2 or 3 times a month
4 Once a month
5 Several times a year
6 Once a year
7 Less frequently
8 Never
97 Refused
98 Don't know, varies too much
99 No answer

in Great Britain (GB-GBN):
7 Less often, never

A. Study Descriptions

Australia
ISSP 2003 – National Identity II
Study Description

Study Description: Australia

Study title: ISSP 2003 National Identity

Fieldwork dates: Start: 27 August 2003
Finish: 24 December 2003

Principal investigators: Rachel Gibson, Australian National University
Shaun Wilson, Australian National University

Sample type: The sample was stratified by Australian states and territories using population counts from the 2001 Census. The selection of individuals within the stratified sample was random using the Electoral Roll for Australia produced by the Australian Electoral Commission (AEC). The 2001 version of the Electoral Roll was updated for 2002 where state and territory elections had taken place. This frame includes all registered voters who must be citizens of Australia (or a British subject on a Commonwealth electoral roll as at 25 January 1984). Since voting in Australia is compulsory, there is a very high proportion of the adult Australia population covered by this frame—approximately 92 percent in 2003.
The sampling method used a random number generator inserted as a field in the electoral roll database; individuals were sorted using the random number and then selected in order. The sampled units were named individuals.

Fieldwork Institute: Australian Social Science Data Archive

Fieldwork methods: Self-completion, paper and pencil, mailed to, mailed back by respondent

Sample size: 2183

Response rates:

5696	A - Total issued
796	B – Not eligible (ill, dead, non-English speaking, not at this address)
4900	C - Total eligible
2183	D - Total ISSP questionnaires received
2717	E - non-responses (including non-contact; see note above under “sample type”)
283	F - Refusals (including questionnaires less than half filled in)
2374	G - Non-contact (included in “E”)
60	H - Other non-response (included in “E”)

Language: English

Weighted: No

Weighting Procedure:

Known Systematic Properties:

Gross sample

Using a sampling frame derived from the AEC Electoral Roll (2001) excludes permanent and temporary residents of Australia (who are not citizens) and any othe r adults in Australia who are non-citizens except for British subjects on a Commonwealth electoral roll as at 25 January 1984. These exclusions amount to approximately 8 percent of
the adult population.

Net sample

The AUSSA 2003 sample demographics were compared with statistics available from the Australian Bureau of Statistics (ABS) including the 2001 Census. The major biases are: age (median age is older than the Census population), education (over-representation of persons with post-secondary school qualifications), and gender (slight over-representation of women).

Deviations from ISSP-questionnaire:

For V4-V6 "Most im portant group R identifies with", the response categories were converted from numbers to letters (A, B, C….) after a
piloting experiment revealed greater respondent accuracy with the latter.

V8 "How close do you feel…": re sponse category was State or territory (appropriate internal regional breakdown for Australia.

V10 "How close do you feel…": res ponse category was Asia (since Australia is both a continent and country)

All changes were approved by the IS SP prior to the fielding of the Survey.

ISSP Characteristics of National Population: Australia

The following data are made available to the ISSP from statistics derived from the Australian Bureau of Statistics (ABS) publications including the June 2001 Census. Please note that the ABS does not compile data on years of schooling completed. In its place, we have used educational attainment data (see Table 3) to provide meaningful comparisons between the AuSSA 2003 sample and ABS data. For further information, please contact Shaun Wilson at Shaun.Wilson@anu.edu.au

Study title: 2003 National Identity
2004 Citizenship

Fieldwork dates: January 29th, 2004 – March 31st, 2004

Principal investigators: Carleton University Survey Centre

Sample type: Stratified Random

Context of ISSP questionnaire how it is in the hard copy questionnaire National Identity with Citizenship

Fieldwork methods:
Self-completion Mail

Sample size: Achieve sample 1069 cases

Sampling method A stratified random sample (by province by gender) of 3,000 Canadian residents was purchased from *Cornerstone List Brokerage*, based on residential phone listings . (% of Canadians without phones < 2%)

The design consisted of two mailouts and 1 reminder notice.

The first mailout of 3,000 packages was mailed on January 29, 2004 and included a questionnaire, explanatory letter printed on the front cover and a postage paid return envelope. On February 10th a reminder postcard was mailed out to the entire sample. On February 26th a second mailout was sent to the respondents who had not returned their survey along with a additional letter explaining the importance of their participation in the project.

Response rates: **Process**

1st wave -Initial mailout -January 29th	3000
Returned as of Feb.24th	678
2nd wave – reminder cards -February 10th	3000

Chile
ISSP 2003 – National Identity II
Study Description

Study Description: **Chile**

Study title: Second National Public Opinion Study 2003

Fieldwork dates: December 6th to 24th 2003

Principal investigators: Carolina Segovia, Carla Lehmann and Paulina Valenzuela of Centro de Estudios Públicos

Sample type: The guiding methodological principle underlying CEP's public opinion surveys is that effective and accurate survey research must be based on a truly representative sample of the universe in question. For CEP's purpose, this universe is made up of Chilean adults 18 years of age and older. Our studies use a probability multistage cluster sample of 1,505 individuals.

The sample is designed in three stages, such that all adult individuals throughout the country have a calculable probability of being included. The 2002 Census data is consulted to determine the regional population structure of people 18 years of age and older. This makes it possible firstly to establish regional stratification and then each region is stratified by rural and urban zone. Table I shows the regional structure of the Chilean population.

Table I

Regional Breakdown of Population (%)

Region		% Population 18 years of age and older[1]	Region		% Population 18 years of age and older[1]
I	Tarapacá	2,8	VII	Maule	5,9
II	Antofagasta	3,2	VIII	Bío Bío	12,2
III	Atacama	1,6	IX	La Araucanía	5,6
IV	Coquimbo	3,9	X	Los Lagos	7,0
V	Valparaíso	10,4	XI	Aisén	0,6
VI	Libertador Bdo. O'Higgins	5,1	XII	Magallanes and Antarctic	1,0
XIII	Metropolitan (Santiago)	40,7			

[1]Source: *2002 Census Data* National Institute of Statistics.

Sampling Stages

First Stage

The first stage of the sampling process sets the number of completed interviews per cluster at 5; a cluster is defined as a block (manzana) or populated entity (entidad).1 The application of 5 interviews per cluster to the total number of interviews targeted in the sample (1,505) yields

1 Blocks *(manzanas)* are used in urban areas, while in rural areas the census equivalent is the entity *(entidad)*.

301 primary sampling units (PSUs) to be identified in the first stage of sample selection.

The PSUs are proportionally distributed throughout the regions of the country, taking into account the region's contribution to population (both urban and rural), as described in Table II.

TABLE 2

Number of Clusters per Region

Region		Number of clusters Urban	Rural	Total
I	Tarapacá	7	1	8
II	Antofagasta	10	0	10
III	Atacama	5	0	5
IV	Coquimbo	9	3	12
V	Valparaíso	28	3	31

VII	Maule	12	6	18
VIII	Bío Bío	30	7	37
IX	La Araucanía	11	6	17
X	Los Lagos	14	7	21
XI	Aisén	2	0	2
XII	Magallanes and Antarctic	3	0	3
XIII	Metropolitan (Santiago)	118	4	122
	TOTAL	259	42	301

Using the most reliable digital information on hand, i.e. 2002 census data, a cumulative listing of population by province (provincia), borough (comuna), district (distrito), zone (zona) and block (manzana) was prepared in the urban case; and by province, borough, district, locality (localidad) and entity (entidad) in the rural case (geographically arranged).

In both the rural and the urban case a fixed interval is set for each region by dividing the total population for that region by the number of PSU's assigned to it. Within each region, a purely random selection process is followed, such that each individual (as represented by population statistics) has a calculable probability of being selected as the reference point for a PSU.

This is carried out through a computerised, random, proportionate-to-population process to select blocks in the urban areas and entities in the rural areas. A computer program is developed to select the 259 urban blocks and the 42 rural entities for the sample. All the blocks and entities are identified by number and located on a census map.

Second Stage

The second stage in the sampling process is to select households (dwellings) within PSUs. Selection rules for households within chosen blocks and entities are provided to interviewers, to enable them to select households randomly within each cluster. After taking a census of each selected block and entity, a random walk or systematic sampling[2] procedure is followed, whereby every nth dwelling is included in the sample until a total of 5 households are identified.

Third Stage

The third stage is to select, within each household, a person to be interviewed. Interviewers are instructed to apply a random selection process (random number table) to identify the person to be interviewed.

Other Important Aspects in the CEP Sample Design

In the second and third stages, the interviewer has to make a minimum of three attempts on three different days to try to reach the original house or person to be interviewed. In these attempts the interviewer must deliver a letter signed by the CEP director explaining the nature of CEP and the aims of the study.

If the original household or person finally cannot be contacted, they are replaced. The rules for replacement are as follows:

A. Blocks and Entities

The replacement of a block or entity will occur only in the following situations:

1) Vacant lots that could not be detected prior to sample selection

2) Areas which are almost inaccessible

3) Entities and/or blocks intended basically for commercial use

4) Parks or stadiums

5) Areas belonging to the armed forces

Blocks and entities are randomly replaced: the original selection is replaced with the one whose identification number comes immediately before that of the original. If this is not successful, the block/entity with the identification number immediately following the original selection is taken.

2 The total number of numbered dwellings was divided by 5 (the number of interviews per cluster); this gave an interval length, such that if it was 43/5 = 8, starting from the point randomly pre-assigned as the first dwelling, the interviewers went to dwelling No 9, then to No 17, and so on until 5 interviews were completed.

B. Households

Failed dwellings are accounted for as follows:

1) by outright refusal to receive the interviewer, even having received the letter from the CEP director.

2) by the absence of occupants at a house after three visits on three different days (vacations or other reasons).

3) the house is unoccupied.

4) access denied (condominiums or buildings with security guards)

5) other special cases (foreigners with whom it is im possible to communicate, etc.)

Each failed dwelling is random ly replaced by another one from the same block/entity. The replacem ent interval is defined as (k-1), where k= the original selection interval. Starting from the last house originally selected, the interval (k-1) is a dded to select the first replacem ent house, and so on. The fieldwork tr eatment of replacem ent houses as regards the num ber of repeat visits is the sam e as f or the original houses.

C. Individuals

Individuals are replaced under the following circumstances:

1) when the person selected refuses to answer the questionnaire, even after receiving the letter from the CEP director.

2) when the person selected cannot be located after three attem pts on three different days, or will be away for a period longer than the duration of fieldwork.

3) the person offers to respond on a da te long after the closing date of the field work.

4) individuals with serious physi cal or psychological handicaps which prevent them from responding (m entally handicapped, deaf and dum b, etc..)

5) the individual is physically and ps ychologically fit, but is ill, in bed and does not want, or is unable to respond to the survey.

6) the selected individual is a fore igner with less than 5 years in the country (unable to vote).

7) the person starts to answer but he/she does not want to finish the interview.

8) other specific cases.

In replacing individuals, the dwelling is replaced according to the rules explained above, and a random selection process chooses an individual from the new household.

It is important to bear in mind that, by using these replacement rules, the sample size achieved is always very close to 1505 (issued sample size).

Context of ISSP questionnaire how it is in the hard copy questionnaire

The National Identity 2003 module of the ISSP was carried out in conjunction with 24 questions relating to Chilean political, economic and social attitudes and tendencies.
The questionnaire was structured as follows: firstly, the 24 questions mentioned above, the complete National Identity ISSP module, and, finally, demographic variables.

Fieldwork methods:

The surveys are carried out through personal interview.

Sample size:

The sample size finally achieved was 1505 interviews

Response rates:

As was explained above in the section "Sample type", the sampling method used by CEP involves the random replacement of those blocks/entities, dwellings or individuals, which for the reasons described above cannot in the end be contacted.
Accordingly, keeping this in mind and using the method for counting the response rate established by the ISSP, we have that:

A = 1,505 = Issue sample
B = 0 = Ineligible
A-B = 1,505 = C= Total eligible
D =1,505= Sample achieved
E = C-D= 0
Response rate = A/D = 1505/1505 = 100%
Non-response rate = 0/1505 = 0.0%

However, for the type of sampling used by CEP, these data are not real. CEP uses the following method for calculating the response rate.

Let A = Number of original interviews achieved (not replaced) = 1,308
Let B = Number of non-original interviews achieved (replaced) = 197
Let C = Number of questionnaires received = A+B = Total sample = 1,505

B = D1 + E1 + F1 + D2 + E2 + G + F2 = 197
where :

D1 = Number of interviews replaced due rejection of household = 63
E1 = Num ber of interviews replaced due to no contact in house (empty house + nobody comes to the door) = 59
F1 = Number of interviews replaced for other household reasons = 11

D2 = Number of interviews replaced due to individual rejection = 28
E2 = Num ber of interviews replaced due to failure to m ake contact with selected individual = 24
G = Num ber of interviews replaced due to physical or psychological impediment of selected individual = 12
F2 = Number of interviews replaced for other individual reasons = 0

No-response rate = Num ber of non-original interviews achieved (replaced) / total number of interviews (replaced + original)
= B / C = 197 / 1,505 =13,1%

Language: Spanish

Weighted: No

Weighting procedure: A weighting procedure is applied in order to correct for distortions in the representativeness of the sam ple as regards three variables of interest: Gender, Age, (grouped in five categories: 18-24 years, 25-34, 35-44, 45-54, 55 or older) and Urban ity (classification of place of residence as urban or rural). This makes it possible to obtain a sam ple with characteristics similar to those of the population. The weights are constructed by calculating the quotient between the expected distribution and that observed in the cross between Urbanity, Gender and Age. The expected distribution is obtained from the 2002 census data provided by the National Institute of Statistics. The result of the weighting slightly corrects for problem s of under- and over-representation among certain specific groups of the population.

Known systematic properties: The sample design described above has been used in the last 17 surveys and has given good results, so it can be stated that it does not have properties that might be causing some type of bias in the results.

Deviations from ISSP-questionnaire:

The questionnaire was translated as closely as possible from English to Spanish, maintaining the meaning and significance of each sentence and word.

Some general comments:

- In questions Q2, Q3, Q4, Q5, Q6, Q7, Q9, Q10, Q11, Q15 and Q16 the code "can´t choose" was replaced wiyh "don´t know" (8) and "no answer".(9)
- Due to problems detected in the pre-test, the question Q12 was finally translated as follows "From what country/countries or part(s) of the world did your direct ancestors, loke your parents, grand parents, or great grand parents, come?".
- Q12 is an open-ended questions, thus the data submitted present a very wide range of codes, so researchers can group them as they want to.
- Q8 was not included in the final version of the questionnaire due to translation problems detected in the pretest.
- Regarding Q1: Due to problems detected in the pre-test this question was asked at the end of the National Identity Module.

DEMOGRAPHICS VARIABLES:

- MARITAL : The code 3 is "ANULADO": In Chile we don't have divorce
- UNION : The code 2 was not included.
- INCOME and RINCOME : In these questions, incomes were measured like monthly net - income.
- ISCO88 and SPISCO88 : The answers were coded with 4 digit when it was possible.
- RCH_PRTY : The codes are :

VALUE LABELS RCH_PRTY

01 Independent National Alliance
02 Communist Party of Chile
03 Christian Democratic Party'
04 'Humanist Party
05 Democracy Party PPD
06 Radical Social Democratic
07 'Chilean Socialist Party
08 National Renewal Party
09 Independent Democratic Union'
10 Other party
11 No party, no preference
98 Don´t know
99 'NA'.

- URBRURAL: It was added new codes, 6 for "Urban, RP total urban" and 7 for "Rural, RP total rural".

Not in Labour Force (5.419.180)	47,0	

Sources:

For Gender, age group and year of schooling: Census 2002 by National Institute of Statistics. Considers population 18 years of age or older.
For employment status: Estimated by National Institute of Statistics. Oct-Dec 2003.
Percentage "Not in labour force" is based on population 15 years of age or older.

Czech Republic
ISSP 2003 – National Identity II
Study Description

Study Description: **Czech Republic**

Study title: National identity II, ISSP 2003

Fieldwork dates: 26.09.2003 – 19.10.2003

Principal investigators: Klara Plecita,
Institute of Sociology, Academy of Sciences of the Czech Republic

Sample type: Three stage stratified probability sampling:
1) Stratified probability sampling of election districts
2) Probability sampling of households in selected district
3) Sampling of household members based on a Kish grid

Fieldwork institute: SC&C

Fieldwork methods: Face-to-face

Sample size: 1276

Response rates:

2441	A - Total issued (total sample)
52	B - Ineligible (address vacant, wrong ages,...)
2389	C - (= A - B) Total eligible (in scope sample)
1276	D - Total ISSP questionnaires received
1113	E - (= C - D; = F + G + H) Total non-response
617	F - Refusals (refusing to take part)
297	G - Non-contact (never contacted)
199	H – Other non-response

Language: Czech

Weighted: Yes

Weighting procedure: Total weight is constructed from:
1) design weights based on proportion of household sizes
2) post-stratification weights based on region, sex, education, age, economical activity, and size of the community.
The weights were derived from data of the Czech Statistical Office.
Method: raking based on loglinear modelling

Known systematic properties of the sample: Due to sampling design the probability of selecting a respondent is 1 / No. of members of his/her household. Due to response differences sex and education significantly differ from the know population characteristics. The biases was corrected by weighting.

Deviations from ISSP questionnaire: All the core ISSP module and background questions were included. Please see the technical report (cz03info.doc) for specifications of selected country specific backgroun variables.

Publications: not yet

Sample type: Sampling-procedure: A representative sam ple (simple random

sample) was drawn from the *Central Population Register* (CPR) – which is a national register of all Danish citizens – from which respondent's name and address were identified. Thus, the sampled unit was 'named individuals'. No stratification, clustering etc. was employed.

The fieldwork method was postal survey (self-completion). One reminder was send out to respondents who had not returned the questionnaire. After this telephone interviews were attempted. If respondents were not reached, they were contacted at least five times before given up as "not meet". In total 88,0 percent of the interviews where completed by mail and 12,0 percent were completed as telephone interviews (cf. MODE-variable).

No substitutions were permitted at any stage of the selection process or during the fieldwork.

The questions in the module were asked in the prescribed order.

Sample size: Issued: 2000
Achieved: 1322

Response rates: The response rate is calculated to 66,4 percent.
Full productive interviews / (Issued names – (respondents moved, no forwarding address + respondents deceased)):
1322/(2000-(6+2)) x 100= 66,4 percent.

Description	**(N)**
Issued names	2000
Selected respondent moved, no forwarding address	6
Selected respondent too sick/incapacitated to participate	43
Selected respondent deceased	2
Personal refusal by selected respondent	430
Other type of unproductive reaction	197
Full productive interviews	1322

Study Description

Study Description: Finland

Study title: Suomi ja suomalaisuus (in Finnish)
Finland och att vara finländare (in Swedish)

Fieldwork dates: September 12th – November 28th, 2003

12th of Sep, 2003	questionnaires mailed
19th of Sep, 2003	thank you/reminder postcard sent to all respondents
8th of Oct, 2003	dead line of answering the questionnaire
13th of Oct, 2003	replacement questionnaires sent to non-respondents
5th of Nov, 2003	dead line of answering the replacement questionnaire
28th of Nov, 2003	last questionnaire received

Principal investigators: Raimo Blom, University of Tampere
Harri Melin, University of Tampere

Sample type: Target population: household population aged 15 to 74. Sampling design: a systematic random sample of individuals.
Sampling frame: population register, sorting order: domicile code and birth date. Stratification: implicit geographic stratification. No clustering.

Fieldwork Institute: Statistics Finland, Helsinki

Fieldwork methods: Postal (both direction), self-completion, paper and pencil

Sample size: Issued: 2500

Response rates:

A – Total issued	2500
B – Ineligible (address unknown or living abroad	6
C – Total eligible	2494
D – Total ISSP questionnaires received	1379
E – Total non-response	1115
F – Refusals	4
G – Non-contact	-
H – Other non-response	1111

Language: Questionnaires in Finnish and Swedish. Information on language from the population register.
Finnish (2 362; 94,5 % of total sample) and Swedish (138; 5,5 % of total sample)

Weighted: Weight variables are included in the data-set. Basic data is unweighted.

Weighting procedure: The design of the survey was system atic sampling. In order to improve the efficiency of estim ation and to reduce bias due to non-

response a calibration method was used for the creation of the weights.

The following marginal distributions of the population were used: 1) gender (male, female), 2) age classes (15–24,25–34,…, 65–74), 3) NUTS3 regions with following modifications: the Greater Helsinki Area was dealt as a separate region, 4) type of community (urban - semi-urban - rural). There are two weights available for calculations: 1) a weight that expands the results to the population level (the sum of the weights is the size of the population) and 2) a weight that doesn't have the expansion property (the mean of the weights is 1 and the sum of the weights is the number of accepted responses, i.e. the size of the data). Both of the weights are based on the same calibration process, only the scale differs.

Known systematic properties of the sample:

Sampling frame is updated and covers total population. A cross-sectional sample does not contain attrition by definition.

After having used our standard sampling procedures for over 20 years we have not encountered any bias due to using systematic sampling. Design effect of the sampling procedure<=1 by definition.

Deviations from ISSP-questionnaire:

The questionnaire included ISSP module with necessary background variables.

List of deviations and coding specifications compared to ISSP source questionnaire:

1) Age
Age is computed from a variable for year of birth in the Finnish questionnaire (FQ).

2) Marital
FQ asked separately a category for those living together (married or not married). They were recoded into same category. Added one code, 0 meaning other (FQ).

3) Wrktype
Added one code, 8 meaning don't know (FQ).

4) Spwrktyp
Added one code, 8 meaning don't know (FQ).

5) Hhcycle
The FQ asked separately on how many persons in the household, how many of them are 7-17 years old and how many children under 7 years of age there are in the household. Hhcycle includes combined information from these variables.

6) SF_reg
Added from register data describing the regions. FQ did not include question for this.

7) SF_size
Added from register data describing the population of the municipality. FQ did not include question for this.

8) Weight and weight_2
As described in the study description,
-[weight]is a weight that expands the results to the population level (the sum of the weights is the size of the population) and
-[weight_2] is a weight that doesn't have the expansion property (the mean of the weights is 1 and the sum of the weights is the number of accepted responses, i.e. the size of the data).

9) SF_ethn
Added from register data describing the ethnic identity (language code). FQ did not include question for this.

Language: German

Weighted: No

Weighting procedure: Sample for eastern Germany deliberately over-samples the five eastern federal states. If all of Germany is taken as the unit of analysis (rather than the eastern and western states) weighting is necessary. Weighting factor for West Germany: 1,232524; weighting factor for East Germany: 0,547722; (recoding of the country variable is necessary)

Known systematic properties of the sample: None for the total sample

Deviations from ISSP questionnaire: ISSP substantive questionnaire: no deviations; Background variables: no deviations

Great Britain
ISSP 2003 – National Identity II
Study Description

Study Description: **Great Britain**

Study title: British Social Attitudes 2003

Fieldwork dates: June to September 2003

Principal investigators: National Centre for Social Research

Sample type: Clustered random sample: addresses were selected with equal probability in a stratified clustered design. One person aged 18+ was interviewed per address.

Fieldwork institute: National Centre for Social Research

Fieldwork methods: The ISSP module is implemented as a self-completion questionnaire, completed by the respondent after the main face-to-face interview and collected by the interviewer.

Sample size: 873

Response rates:

2062	A - Total issued (total sample)
182	B - Ineligible (address vacant, wrong ages,...)
1880	C - (= A - B) Total eligible (in scope sample)
873	D - Total ISSP questionnaires received
1007	E - (= C - D; = F + G + H) Total non-response
569	F - Refusals (refusing to take part)
260	Face-to-face interview but no self-completion
79	G - Non-contact (never contacted)
99	H - Other non-response

Language: English

Weighted: Yes

Weighting procedure: Addresses were selected with equal probability (except in Scotland where allowance was made for MOI – see below) but only one person interviewed at each address. Therefore weights need to be applied to correct for different number of adults at each address. The weights are calculated by the following formula:
weight = (number of households at the address * number of adults in selected household) / MOI
where MOI is the Multiple Output Indicator (MOI>1 indicates more than one household at the address).
Very large weights were capped and the weights were scaled to make the

	weighted sample size equal to the unweighted sample size.
Known systematic properties of the sample:	Sample excludes Scotland north of the Great Glen.
Deviations from ISSP questionnaire:	V64 to V74, Ethnic and TopBot are not available. The following variables were collected only if the respondent was not economically active/retired and the spouse partner was economically active/retired : SPISCO88, SpWrkTyp.

Hungary
ISSP 2003 – National Identity II
Study Description

Study Description: Hungary

Study title: National Identity II.

Fieldwork dates: 2003.02.28 – 2003.03.12.

Principal investigators: Antal Örkény, ELTE University Budapest

Sample type: We used probability sample, which was selected in multiple stages with proportional stratification. In the first stage, localities were chosen. In the second stage, the respondents were chosen from the localities with simple random sampling.

Creating the sample of localities:
The regions formed the first strata, type of settlements were the second. The localities were chosen from these strata by random sampling. For every county at least 2 towns and 3 villages were selected. The 23 districts of Budapest formed a separate sampling unit.

Creating the sample of individuals:
After creating the locality sam ple, and deciding the required num ber of respondents for every locality, we used ‘ ***pre-selected addresses’*** sampling methods for selection of respondents.

The number of respondents in the previously chosen localities was defined in accordance with the proportion of the population of the given strata – regions, and dif ferent types of localities (towns and villages) within the region.

The names and addresses were obtai ned from the Central Registry and Electoral Office with the help of simple random sampling.

To replace dropped-out addresses subsidiary addresses were chosen with ‘random walk’ method, based on the Leslie-Kish—key.

Fieldwork institute: TÁRKI RT Social Research Centre

Fieldwork methods: mode of interview: face to face

Sample size: number of respondents in the final ISSP file:1021

Response rates:

1684	A - Total issued (total sample)
109	B - Ineligible (address vacant, wrong ages,...)
1575	C - (= A - B) Total eligible (in scope sample)
1021	D - Total ISSP questionnaires received

176	H - Other non-response

Language: Hungarian

Weighted: yes or no, whether a weighting factor exists in the data-set:
YES

Weighting procedure: Exact description of the weighting procedure / algorithm
In order to correct the sampling error we computed a weighting variable taking into account the type of residence (Budapest, other city, village), sex (male, female), age (18- 29, 30- 39, 40- 49, 50- 59, 60- 69, 70- x) and highest level of educational (primary , secondary, tertiary). The weight of each cases was computed as WEIGHT = (n/n')* (N'/N), where N = respondent above the age of 18 in the sample of 2001 census, N' = 1000, n = frequency of the population category in the census sub-sample the case belongs to, n' = parallel frequency in the 2003 National Identity II module of TARKI.

Known systematic properties of the sample: Description of biases or other deviations of the sample

Ireland
ISSP 2003 – National Identity II
Study Description

Study Description: Ireland

Study title: National Identity II 2003

Fieldwork dates: 1st Oct 2003 to 15th Nov 2003

Fieldwork institute: Economic and Social Research Institute (ESRI)

Principal investigators: Nic Ghiolla Phádraig, Máire; Watson, Iarfhlaith
Social Science Research Center, University College, Dublin

Sample type: The sample used in the ISSP survey was selected as a three-stage clustered probability sample of the adult population drawn from the electoral register.

First stage of sample selection

At the first stage of sample selection the national population on the register was grouped into clusters with a minimum population size of 1,000 adults. (These clusters were based on the most geographically disaggregated areal units available in the country – the so-called District Electoral Divisions (DEDs)). These clusters with a minimum population size of 1,000 persons constituted the primary sampling units (PSUs). The PSUs were selected with a probability proportionate to size (PPS). A total of 100 sampling points was selected.

Second stage of sample selection

At the second stage of selection the target household was selected from within each PSU on a systematic basis using a random start.

Third stage of sample selection to identify the respondent

At the third stage we selected the target person for interview within household from within the set of persons aged 18 years or more using a so-called 'next birthday' rule. The next birthday' rule is a simple randomisation procedure which provides a randomly selected respondent in much the same way as a Kish grid etc.

Fieldwork methods: Face-to-face

Sample size: 1000

Known limitations: Using the Electoral Register as the population frame means that very recently generated households which are not yet registered on the list have, by definition, a zero probability of selection. This is not a major issue and is, in fact, common to all population lists. The data were reweighted using a minimum information loss program which controls, *inter alia*, for age; gender; household size (number of adults in the household); marital status; level of educational attainment; region; principal economic status. This reweighting scheme addresses any such small bias as may emerge from frame effects.

Response rates:

Total number of starting or issued names / addresses (gross sample size)	1,648
addresses which could not be traced at all / selected respondents who could not be traced	48
addresses established as empty, demolished or containing no private dwellings	40
selected respondent too sick / incapacitated to participate	
selected respondent away during survey period	
selected respondent had inadequate understanding of language of survey	
no contact at selected address	
no contact with selected person	
personal refusal by selected respondent	252
proxy refusal (on behalf of selected respondent)	
other refusal at selected address	
other type of unproductive reaction (please write in full details in the box below) [Most of these were 'soft' refusals where the respondent was not available for interview throughout the fieldwork period despite repeated call-back]	220
full productive interview (net sample size)	1,065
partial productive interview	23

Language: English

Weighted: Yes

Weighting procedure: The data were re-weighted using a minimum information loss algorithm called Gross. This is used in almost all surveys carried out by the Economic and Social Research Institute in Dublin. It is similar to the Calmar software prepared by Insee and is based on reconciling distributions in the data to column marginals. The control variables used in reweighting the ISSP were: number of adult sin the household, gender, age cohort (8 categories), marital status, level of educational attainment, principal economic status, and planning region.

Japan
ISSP 2003 – National Identity II
Study Description

Study Description: Japan

Study title: ISSP National Identity

Fieldwork dates: November 29 to December 7, 2003

Principal investigators: ARAMAKI Hiroshi, KOBAYASHI Toshiyuki (NHK Broadcasting Culture Research Institute)

Sample type: Two-stage stratified random sample of Japanese 16 or older
First, urban and rural areas are divided into a number of groups (strata) based on similarities in local features and industrial structures. From each of those groups, streets and village-sections are again grouped together to form sampling units. From among such sampling units, 150 survey spots are selected at random. Then, from *the Basic Resident Registers* for these spots, 12 sample individuals aged 16 or over are selected according to a fixed random number.

Fieldwork institute: Central Research Services, Inc.

Fieldwork methods: Face-to-Face

Sample size: Issued 1.800, Achieved 1.102

Response rates:

1.800	A - Total issued (total sample)
103	B - Ineligible (address vacant, wrong ages,...) 18 respondents were not found 81 respondents moved somewhere else 4 respondents died
1.697	C - (= A - B) Total eligible (in scope sample)

Deviations from ISSP questionnaire: SPISCO88 is not available.

Classification of Occupations (country specific)

1. Agricultural, Forestry or Fishery workers
   Those who are engaged mainly in agriculture, forestry or fishery and family workers

2. The Self-Employed
   Those who operate shops, restaurants, plants, etc. each with 9 employees or less, as well as their family workers

3. Sales or Service Workers
   Employees or sales persons at shops, restaurants, department shores, etc.
   Employees at barber shops, beauty parlors, places of amusement, etc.
   Waiters and waitresses, housekeepers, transport conductors, station clerks, travel attendants
   Sales persons, canvassers, bill collectors

4. Industrial Workers
   (Skilled Workers)
   Locomotive-engine and motor-vehicle drivers
   Those engaged in such work as manufacturing, repairs, assembly, processing, printing, spinning, sewing, tailoring, packing and bailing
   Carpenters, joiners, plasterers, cabinetmakers
   (Manual/Unskilled Workers)
   Laborers in mining, construction, manufacturing and transport
   Street vendors, deliverymen, garbage collectors

5. Clerical and Technical workers
   Clerical and technical employees of business firm, public organizations and governmental agencies
   Section and division chiefs of business firms and organizations with 49 employees or less
   Those engaged in transportation, such as pilots and navigators
   Education-related personnel such as college lecturers, teachers and nursery governesses
   Medical-related persons such as pharmacists and nurses

6. Business operators or Managers
   Directors and managers with the post of section chief or above of government offices
   Directors and managers of business firms and organizations with 50 employees or more
   Those who operate business firms and organizations with 10 to 49 employees
   Directors of a kindergarten, headmasters, chief teachers, college presidents
   Captains and crew chief of ocean-going vessels and aircraft and of craft serving major domestic routes

7. Specialists, Free-lancers, etc.
   Medical doctors, lawyers, judges, certified public accountants, college (assistant) professors
   Artists (painters, performers, etc.) and masters of various arts
   Those related to professional sports, religious activities, politics
   Self-Defense force personnel, policemen

8. Housewives

Women engaged mainly in housework

×Women who live alone are put in category 10 (Jobless)

9. Students

High school students Higher professional school students, junior college students, university students, graduate school students, special school students and miscellaneous school students

×Those who attend night high school or colleges, while working in the daytime, are put in categories 1 to 7

10. Jobless

Those who are not now employed and those who live on pension, etc.

97. Refused

99. No Answer

*Job-holders	Total of those listed in the items numbered 1 to 7
*Employed persons	Total of those mentioned in the items numbered 3, 4, 5 and 6

Latvia
ISSP 2003 – National Identity II
Study Description

Study Description: **Latvia**

Study title: National Identity II

Fieldwork dates: 10.12.2003 – 29.12.2003

Principal investigators: Aivars Tabuns, University of Latvia; Ilze Koroleva, Institute of Philosophy and Sociology, University of Latvia

Sample type: Multistage stratified random sample

Fieldwork methods: Face-to-face interview

Context of ISSP-questionnaire: ISSP module was fielded together with ISSP module "Family and changing gender roles" (topic A) and it included the 3rd topic of questions (C) on medical care.

Sample size: N = 1000

Response rates:

Real numbers	
N = 1805	A - Total issued (total sample)
N = 96	B - Ineligible (address vacant, wrong ages,...)
N = 1709	C –(A - B) Total eligible
N = 1000	D - Total ISSP questionnaires received
N = 709	E - (=C – D; = F + G) Total non-response
N = 285	F – Refusals
N = 391	G - Non-contact (never contacted)
N = 33	H - Other non-response

Language: Latvian, Russian

Weighted: No

Netherlands
ISSP 2003 – National Identity II
Study Description

Study Description: **Netherlands**

Study title: "ISSP 2003+2004: Nationale Identiteit en Burgerschap. Schriftelijke vragenlijst 2004-2005."

Fieldwork dates: Dec. 12 2004 – Mar. 31 2005.

Principal investigators: Harry B.G. Ganzeboom

Sample type: (Step 1:) Simple random address sample, (Step 2:) random date selection of household member

The data will appear in the ISSP publicly released data as two independent data-files. The user should be aware that the social background variables are identical between these modules, and the two files should be matched, not added.

The user should also be aware that the complete datafile (described in this documentation), including all the collected information on demography and social background, as well as the standardized ISSP variable is available has been archived at DANS [Data Archiving and Networked Services] in the Hague, the successor to the Steinmetz Archive. The appropriate bibliographic reference to this file will be:

Ganzeboom, Harry B.G. [principal investigator] & Elsbeth de Groot, "ISSP 2003+2004: Burgerschap en Nationale Identiteit. Schriftelijke vragenlijst 2004-2005." [machine-readable data file]. The Hague: DANS. To be archived.

QUESTIONNAIRE DEVELOPMENT AND POST-PROCESSION

The questionnaire was developed at VUA in close consultation with SCP. For the repeat questions of the modules translation from previously held modules were copied. Translations of new questions were developed in in-depth discussion between VUA and SCP researchers. The background variable modules were drafted anew, in close correspondence with specifications in the ISSP master documentation. However, the mandatory background questions were complemented with a large number of supplementary questions, in particular on parental background.

The questionnaire was organized in four consecutive parts:
Z01..Z08H_ACT: Demographics: age, sex, marital status, education of respondent and spouse, household box
A01A..A24: National Identity module:
B01..B66: Citizenship module.
Z09U..Z42: Demographics: employment, occupation, father's and mother's education and occupation, income, religion, media participation, political participation, union membership, other ISSP

standard variables.

The 2003 and 2004 modules were thus asked in consecutive order, without interruption by other questions.

All questionnaires were checked on completeness and inconsistencies upon mailback. Multiple answers were resolved by choosing randomly one of the chosen responses. All verbatim information to open ended questions was transferred to a coding file. All coding was conducted by the principal investigator. The coding file (with the verbatim information) has been archived with the datafile, but is only accessible with special permission of the PI.

Response: 41,3% (*)

The fieldwork consisted of the following stages:

One week before fielding an advance letter was sent to all 4500 addresses in the sample. A few reactions were received at this stage that indicated that the address was out of frame (address does not exist, inhabitants have moved, undeliverable) or respondents could or did not want to participate.

Questionnaires were mailed.

One week after the first mailing, a reminder on postcard was sent to all addressed.

Three weeks after the first questionnaire was sent, a reminder in the form of a formal letter was sent. This letter invited respondents who did not want to participate, to return the questionnaire empty – in order not to be reminded again.

Six weeks after the first questionnaire, a second copy of the questionnaire was sent.

Two weeks after the delivery of the second copy of the questionnaire, all respondents with a known phone number were reminded by phone. Their responses were classified into (1) phone refusal, (2) willingness to participate. When respondents told us they had not received a questionnaire or had thrown it away, a third copy of the questionnaire was sent.

Two weeks after the initial phone reminder, respondents who had expressed willingness to participate, were reminded once again by phone.

Throughout the fieldwork, respondents could call (in fact: call an answering machine) to ask further information, refuse participation or make comments. Once respondents had expressed non-willingness to participate, either by phone or mail, they were not contacted again. General information on the ISSP project and the datacollection was also provided on a website, that was referred to on the questionnaire and all the information send to the respondent.

Table 1: Mailings and response pattern

Week	Arrival Date	Action	Sent out	Response End week	Refused	Out of frame

				100%		

Fieldwork institute: Free University Amsterdam

Fieldwork methods: Postal survey

Sample size: 1823

The sample was drawn from the national addresses list of DMdata, a subsidiary of TPG, the Dutch national postal agency. The specifications called for one randomly drawn residential address each from 4500 randomly chosen six-digit postal code tracts. A postal code tract typically contains from a dozen up to a few dozen addresses. For over 85%, the addresses are associated with a family name – the remaining 15% were addressed as "To main occupant [hoofdbewoner]". The addresses were matched with the national phone register, which resulted in 70% of addresses being associated with a phone number.

Sampling within households was conducted by random date selection. The addresses were stratified in 12 random date groups and the addressed was invited to have the questionnaire completed by the household member whose birthday was closest to the date specified.

Table 2: Response and non-response

	N		
Initial sample	4500	100.0%	
Undeliverable	101	2.2%	

Net sample	4399		100.0%
Valid response	**1823**		**41.4%**
Explicit refusal	652		14.8%
No response	1924		43.7%

Language: Dutch

Weighted: No

Weighting procedure: post-stratification
There are four pieces of information that can inform us about selectivity that occurs because of non-response, and can be used to post-stratify the data.

Sample-frame information
Location of the sampled address. It is to be expected that response in urban areas, and in particular in the four major cities (Amsterdam, Rotterdam, The Hague, Utrecht) is lower than elsewhere.
Name: for about 11% of the sample there was no access to a name of the inhabitants. This has decreased the response.
Phone: for about 32% of the sample there was no access to a phone number. Apart from obstructing the opportunity to use the fourth and fifth (phone) reminders, it is to be expected that not being listed in the phone-register is a correlate of willingness to participate.
Foreign family name: Family names in the Netherlands can with considerable accuracy be classified as foreign and non-foreign. In particular Moroccan and Turkish names are easy to recognize, this is much harder for Surinamese and Antillean names.

In 13 cases, the respondents had removed their identification number from the mailed back questionnaire, although they supplied useable information. These questionnaires cannot be connected to the sample frame information and thus cannot be post-stratified in this respect (and these respondents kept receiving reminders to the very end…)

Ecological information (neighbourhood characteristics)
Neighbourhood characteristics (connected to the detailed postal code in the sample frame) can be expected to predict response patterns This information has not been used for post-stratification. Its usefulness is left for future investigation.

Household box information
Selectivity may also occur within responding households. Each respondent was asked to complete a household box , which gives access to information of all household members with respect to:

- Sex
- Age
- Position in household
- Main activity

Highest completed / current education.

In addition, we have information on:

Total number of persons in household eligible for the sample (i.e. all household members of 16 and older).

Using this information, a synthetic sample can be formed that is representative of all household members in the designated age bracket (16-75+). The actual sample should be representative of this synthetic sample. All this information was used to develop the post-stratification weight.

Netherlands
ISSP 2003 – National Identity II
Characteristics of National Population

National benchmark information

Finally, sample distributions can be compared to known distributions in the national population or other (presumably more representative) surveys. However, in order to make a valid comparison, one has to make sure that the variables in question are identically measured. We believe this can be done with sufficient precision with respect to:

Formal marital status
Age
Sex
Participation in last national election

Note that we do not believe that highest/current education or main activity can be compared to national benchmark information, because responses to these questions are too sensitive to question formats.

The weight was developed using iterative proportional fitting with a precision of ± 1% of the margins of the benchmark distributions.

Table 1: Benchmark distributions, unweighted sample data and weights

URBANIZATION*	**Benchmark**	**Sample**	**Weight**	**Weighted**

Did vote	80	90.6	0.885	19.9

Sources: * Sampling frame, ** Household box, *** Population statistics

In summary, it can be said that one group was severely underrepresented in our effective sample: young adults, in particular in as far as they live in their parents' households. Among these, the younger children (16 year olds) are particularly underrepresented. However, the highest marginal weight (2.1) is generated to non-voters. Non-voting has been found to be a strong correlate of non-response in surveys, as is the presence of name and phone number in the address register. Note on the other hand, that the sample is fairly representative with respect to education and main activity. An unexpected finding is that the four large cities are only moderately underrepresented.

New Zealand
ISSP 2003 – National Identity II
Study Description

Study Description: **New Zealand**

Study title: National Identity II: New Zealand

Fieldwork dates: 11 September 2003 to 28 November 2003

Principal investigators: Professor Philip Gendall, Department of Marketing, Massey University, Palmerston North, New Zealand

Sample type: Systematic random sample from electoral rolls

Fieldwork institute: Mail survey in four waves

Context of ISSP questionnaire: Dedicated survey, with ISSP questions preceding non-ISSP questions and demographics.

Sample size: 2200

Response rates:

2200	A - Total issued (total sample)
313	B - Ineligible (address vacant, wrong ages,...)
1887	C –(A - B) Total eligible
1038	D - Total ISSP questionnaires received
849	E - (=C – D; = F + G) Total non-response
70	F – Refusals
-	G - Non-contact (never contacted)
779	H - Other non-response

Response Rate

The response rate achieved was 1038/(2200-313) = 55.0%

	Response from First mailing	Response from Second mailing	Response from Third mailing	Response from Fourth mailing
Issued	2,200	1,536	1,114	907
Gone-no-address	100	37	36	45
Ineligible	20	27	28	20
Total eligible	2,080	1,472	1,050	842
Refusals	21	23	15	11
Valid responses	523	335	128	52
Other non-response	1,536	1,114	907	779

Language: English

Weighted: No

Weighting Procedure: None

Known Systematic Properties in Sample:

Deviations from ISSP Questionnaire: See notes

Publications:

Sampling procedure: The sample was randomly selected from the 2002 New Zealand electoral roll, which contains the names of all registered voters over the age of 18 years. The achieved sample is generally representative of the New Zealand population over 18 years of age, but people under 30 are underrepresented in the sample, while those over 30 are overrepresented, and the proportion of women is higher than in the population whereas the proportion of men is lower. The data have not been weighted to correct this biases. However, comparisons of unweighted survey results with results obtained from the sample weighted so that its age-sex distribution matched that of the New Zealand population over 18 (taken from the 2001 Census), showed only minor differences between estimates.

Survey administration procedure: The questionnaire together with a covering letter was sent to the 2200 selected participants on 11 September 2003. A reminder letter and another questionnaire were mailed to participants whose questionnaire had not been returned by 25 September.
A second reminder and another questionnaire were sent to those who had not returned their questionnaires by 16 October. A final reminder letter (without an accompanying questionnaire) was sent to all remaining non-respondents on 4 November. The survey was closed off on 28 November, 12 weeks after the initial mailing.

Norway
ISSP 2003 – National Identity II
Study Description

Study Description: **Norway**

Study title: National Identity

Fieldwork dates: 8 October – 5 December 2003

Principal investigators: Knut Kalgraff Skjåk, NSD
Oddbjørn Knutsen, Department of Political Science, University of Oslo
Olav Aagedal, Diaconia College Centre
Ole Gunnar Winsnes and Paal Ketil Botvar, Centre for Church Research

Sample type: The sample was a simple random sample of individuals from the Central Register of Persons, aged 18-79 years.

Fieldwork institute: TNS Gallup

Fieldwork methods: The survey was conducted as a mail survey. The fieldwork included one reminder and two follow-ups with questionnaires

Sample size: 1469

Response rates:

2500	A - Total issued (total sample)
50	B - Ineligible (address vacant, wrong ages,...)
2450	C - (= A - B) Total eligible (in scope sample)
1469	D - Total ISSP questionnaires received
981	E - (= C - D; = F + G + H) Total non-response
82	F - Refusals (refusing to take part)
862	G - Non-contact (never contacted)
37	H - Other non-response

Language: Norwegian

Weighted: No

Weighting procedure:

Known systematic properties of the sample: Net sample:
Women in paid work slightly over-represented

Spouse's work status (SPWRKST) missing

Deviations from ISSP questionnaire:

Philippines
ISSP 2003 – National Identity II
Study Description

Study Description: Philippines

Study title: ISSP 2003 Module on National Identity in the Philippines

Fieldwork dates: March 10 – 25, 2003

Fieldwork:

Location:
The ISSP 2003 Module on Identity survey covers the entire Philippines and had four
major study areas: National Capital Region (NCR), Balance Luzon (outside NCR),
Visayas and Mindanao.

Timetable:

National Capital Region	- March 10 - 25, 2003
Balance Luzon	- March 14 - 25, 2003
Visayas	- March 15 - 23, 2003
Mindanao	- March 15 - 24, 2003

Respondents:

The gathered data through on voting-age through face-to-face interviews of voting-age adults (18 years old and above). It asked a host of questions about political, social and economic issues, some undertaken as regular indicators monitored over time and others reflective of current concerns as well as specific personal information. It also obtained information and background characteristics about the household, the household head and family members.

Sampling Method:

Sampling Sizes and Error Margins. An indicator of data quality used is the standard error of the estimate, on which the margin for sampling error is based. As survey statistics are mostly proportions, the key measure of data precision is the standard error of a proportion taken from a sample. It is computed as follows:

$$\pm Z * \sqrt{p(1-p)/n}$$

Where Z, at 95% confidence level is 1.96; p is the sample proportion estimate and n is the sample size. The overall sample size of 1,200 voting-age adults for each of the questionnaires gives a maximum error margin of ±2.83% at the 95% confidence level, assuming a simple random sampling design. The sampling error is at its highest when the true proportion being estimated is close to 50%.
The following approximate 95%-confidence margins for sampling error should be made when aggregating data at various levels:

	Sample Size	Error margin
Philippines	1200	±3%
National Capital Region	300	±6%
Balance Luzon	300	±6%

Visayas	300	±6%
Mindanao	300	±6%

However, somewhat higher error margins should be expected since multi-stage cluster sampling was used; this design-effect is not readily measurable through established statistical software.

Sampling scheme. The Philippines were divided into four study areas: National Capital Region(NCR), Balance Luzon, Visayas, and Mindanao. The sample size for each of the four study areas was 300 voting-age adults.

Multi-stage probability sampling was used in the selection of sample spots. The allocation of sample units in each stage was as follows:

	Sample Prov.	Sample Mun.	Spots	Probability Respondents
National Capital Region	-	17	60	300
Balance. Luzon	10	15	60	300
Visayas	5	15	60	300
Mindanao	5	15	60	300
	20	62	240	1200

For the National Capital Region

Stage 1. Selection of sample Precincts

For NCR's first stage, 60 precincts were distributed among the 17 NCR cities and municipalities in such a way that each city/municipality was assigned a number of precincts that was roughly proportional to its population size. An additional provision was that each municipality must receive at least one precinct.

Precincts were then selected at random from within each municipality with probability proportional to population size.

Stage 2. Selection of Sample Households

In each sample precinct, interval sampling was used to draw 5 sample households: A starting street corner in the precinct map was drawn at random.
The first sample household was selected randomly from the households nearest to the starting street corner.
Subsequent sample households were chosen using a fixed interval of 6 households in between the sample ones; i.e. every 7th household was sampled.

Stage 3. Selection of Sample Adult

For the third stage, in each selected household, a respondent was randomly chosen among the household members who were 18 years of age and older, using a probability selection table. In selecting the probability respondent in a household, only male family members were

pre-listed in the probability selection table of odd-numbered questionnaires; only female family members were pre-listed for even-numbered questionnaires; In case where there was no qualified probability respondent of a given gender, the interval sampling of households would continue until five sample respondents were identified.

For the rest of the Philippines

Stage 1. Allocation and selection of sample provinces
Balance Luzon was further divided into 5 regions: CAR + Region II, Region I, Region III, Region IV and Region V; Visayas into 3 regions: Region VI, Region VII and Region VIII; and Mindanao into 5 regions: Region IX, Region X + CARAGA, Region XI, Region XII and ARMM.

Using probability proportional to population size (PPS) of the region, the allocation of 10 provinces in Luzon, and 5 each in Visayas and Mindanao were as follows:

Luzon		Visayas		Mindanao	
CAR/REG II	1	Region VI	2	Region IX	1
Region I	1	Region VII	1	RegX+CARAGA	1
Region III	2	Region VIII	1	Region XI	1
Region IV	3			Region XII	1
Region V	1			ARMM	1
Non-quota	2		1		0
Total	10		5		5

The non-quota provinces were selected without replacement using probability proportional to their remainders. The remainders are the fractions derived when the proportion of the regions (based on their respective study area) are multiplied by 10 for Luzon, and 5 each for Visayas and Mindanao. For instance, if 1.45 is obtained for Region I, then 1 province is assigned to this region and the remaining fraction of 0.45 is included for the allocation of the non-quota province.
Given the quota for each region, sample provinces were then selected by PPS, without replacement. An additional provision is that each region must receive at least one province.

Stage 2. Allocation and selection of sample municipalities

Within each study area, 15 municipalities were allocated among the sample provinces. 15 were multiplied by the proportion of the provinces. The resulting integers became the number of municipalities in that province. If there were remaining municipalities to be allocated, they were distributed using probability proportional to the remainders. Sample municipalities were then selected from within each sample province with probability proportional to population size, without

replacement. An additional provision was that each province must receive at least one municipality.

Stage 3. Allocation and selection of sample spots

Once the sample municipalities were selected, 60 spots for each of the major areas were allocated among the sample municipalities. Using the quota set for spots in each region, the spots were distributed in such a way that each municipality was assigned a number of spots roughly proportional to its population size.

Luzon		Visayas		Mindanao	
CAR/REG II	8	Region VI	25	Region IX	10
Region I	8	Region VII	21	RegX+CARAGA	16
Region III	14	Region VIII	14	Region XI	17
Region IV	21			Region XII	9
Region V	9			ARMM	8
Total	60		60		60

If the chosen sample municipality/city is 100% urban based on the 1990 (latest) NSO classification, then sample precincts were systematically drawn from this city/municipality. Otherwise, sample barangays within each sample municipality were selected using simple random sampling without replacement.
If based on the National Statistics Office categorization, the chosen sample municipality/city was 100% urban in 1990 (latest), then sample precincts were systematically drawn from this municipality/city. Otherwise, sample barangays within each sample municipality were selected with equal probabilities.
In the effort to update the urban-rural classification of barangays, the survey adopted a classification scheme slightly different from the official NSO definition. The interviewers were instructed to ascertain whether the barangay has the following:

A. Street patterns, i.e. network of streets in either parallel or right angle orientation
B. At least 6 establishments (commercial, manufacturing, recreational and/or personal services)
C. At least three of the following:
   1. Town/Barangay Hall/Church/Chapel
   2. Public Plaza/Park/Cemetery
   3. Market Place
   4. Public building like school, hospital, health centre or library

If the barangay has all categories as A, B or C, then the barangay were classified as urban. Otherwise, the barangay was classified as rural.

Stage 4. Selection of Sample Households

For the fourth stage, within each sample spot, five households were established by systematic sampling. In sample (urban) precincts, a random corner was identified; a random start generated; and the interval was seven. In ascertained urban barangays (with no precinct maps), the designated starting point was the same as in rural barangays – it was a school, the barangay captain's house, a church/chapel or a barangay/municipal hall. The sampling interval for urban barangays was seven, while for rural barangays it was two.

Stage 5. Selection of Sample Respondents

For the fifth and final stage, as discussed earlier, a respondent was randomly chosen from among the voting-age adults in each selected household using a probability respondent selection table.

Research Methodology:

a. Preparation

1. Questionnaire

The definitive language-version of the questionnaire, Tagalog, was translated into English, Cebuano, Ilonggo, Ilocano and Bicolano by language experts. Then the language translation was translated back to Tagalog by another set of experts to make sure that the messages were conveyed accurately.

2. Pre-Testing and finalizing the questionnaire

SWS pre-tested the questionnaire on 10 voting-age adults from different socio-economic classes in order to:

- Determine the time length of the interview
- Improve the wording of the questions, if necessary
- Eliminate unnecessary questions or add new items, as the case may be
- Test question sequence and identify biases
- Correct and improve translation
- Change open-ended questions into multiple choice questions
- Find out which items are conceptually vague
- Check accuracy and adequacy of the questionnaire instructions
- Determine whether the focus of the question is clear
- Identify interviewer's recording difficulties

3. Training

(a) Training was conducted in 3 central locations: Manila, Iloilo city and Cebu City. The interviewers needed to cover Luzon were trained in Manila. They implemented the Tagalog and Ilocano versions of the questionnaire. Those trained in Iloilo covered Ilonggo-speaking regions, while those in Cebu City covered all of Cebuano-speaking areas (Central & Eastern Visayas and Mindanao).

(b) Training time – The minimum training time for group supervisors and interviewers was 3 days prior to field implementation.
(c) Training Activities – These mainly consisted of:
One or two day's office training to learn the basics of the project.
Mock interviews with co-workers to get accustomed to the flow of interviewing and questionnaire format.
Practice interviews with a supervisor until the interviewer could be left on her own.
(d) Evaluation of interviewer's work – The interviewer was left to interview on her own only after she has conducted 3 successive interviews without committing any error in interviewing and recording.

b. Field Work

1. Supervision
Supervisors reporting to the field manager monitored the study full-time. They observed interviewers, (at least 10% of total interviewers were observed by supervisors), followed-up and did surprise checks on the field interviewers. They also ensured that field logistics were received promptly and administered properly.

2. Spot-checking
Spot-checking was done at various stages of fieldwork. The first one took place after about 30% of interviews were completed. The second spot-checking was conducted after 60% completion and the last one, immediately after 90% completion of interviewing.
During spot-checking, at least 20% of the unsupervised interviews were reinterviewed/backchecked.

c. Number of calls and Substitution
A respondent not contacted during the first attempt was visited for a second time. If the respondent remained unavailable, a substitute who possessed the same qualities (in terms of gender, age bracket, and socio-economic class) as the original respondent was interviewed. The substitute respondent was taken from another household beyond the covered intervals in the sample precinct/barangay.

d. Field Editing
(a). After each interview, the interviewer was asked to go over her own work and check for consistency.
(b). All accomplished interview sheets were submitted to the assigned group supervisor who, in turn, edited every interview.
(c). Data Processing
(1) An office editor conducted a final consistency check on all interviews prior to coding.
(2) Interview sheets were edited/checked twice by office editors before the information was encoded into diskettes.
(3) A data entry computer program verified and checked the consistency of the encoded data before data tables were generated.

Weighting procedure: To yield representative figures at the national level, census-based population weights were applied to the survey data. The weight projection was computed by dividing the projected population in the area by the sample size of the same area. Appropriate projected factors were applied so that original population proportion were reflected in the data tables using this formula:

$$\text{Projection factors (Weight)} = \frac{\text{Population}}{\text{No. of Interview}}$$

For questions answered by the sample voting-age adults, the following projection factors were used:

	2002 NSO Projected population Aged 18 and above	Total Sample size	Projection factor for 1 Probability Respondent (000)	Projection factor for 2 Probability Respondent (000)
NCR	6,926,430	300	23.0881014336	11.5440507168
Balance Luzon	19,631,544	300	65.4384809797	32.7192404898
Visayas	9,281,157	300	30.9371910397	15.4685955199
Mindanao	10,634,787	300	35.4492909369	17.7246454685
TOTAL	**46,473,919**	**1,200**		

The SPSS version of the data file is already weighted according to the above projection factors. As the data are weighted, the total number of cases that appear is 46,474. This figure is in thousands, i.e., 46,473,919 persons representing NSO's projected number of adults (18 years old and above) for year 2002 based on the 1995 Census.

Researchers who are defining data using the ASCII files should apply these projection factors.

Poland
ISSP 2003 – National Identity II
Study Description

Study Description: Poland

Study title: Polish General Social Survey/ISSP, 2003

Fieldwork dates: January, 2005

Principal investigators: Bogdan Cichomski, Institute for Social Studies, Warsaw University (ISS UW) and Warsaw School of Social Psychology (SWPS)

Sample type: Multi-stage area probability sample.
The sample was drawn from The Common Electronic Population Evidence System - PESEL (a governmental agency).

Sampling procedure consists of the three stages:
1. In each of the 16 voivodships in Poland places of living were divided up into three categories
1) capital of the region
2) other cities
3) villages
In voivodships with the higher number of people the class "cities" was additionally divided up into 2-6 smaller categories. In Mazowieckie and Slaskie voivodships there was also a division into two strata in the "villages" class.
As an effect there was 65 strata taking into consideration the administrative division of the country and type and size of the place of living.

Assumed sample size was divided up into the strata taking into consideration different completion rates in classes of places of living in voivodships. It means that from classes of places of living where the completion rates are known to be lower then in other there was an over-representative sub-sample sampled.

2. Then in CBOS (Public Opinion Research Center) cities and villages communes were sampled. After that in PESEL data-base some small areas of the cities and villages communes were sampled. Persons to be interviewed were chosen also from the PESEL data-base from the previously selected areas. In cities, small areas covered some streets and it's neighborhood and in villages the areas of one village and/or some of it's streets.

3. In each stratum at least two small areas were sampled. From each small area six adults living in different locations and in different households were sampled.

Fieldwork institute: Public Opinion Research Center (CBOS), Warsaw

Fieldwork methods: Self-administered supplement completed after the PGSS and face-to-face interview and after ISSP 2004 Citizenship which was also face-to-face (self-administered/interviewer attending =76,6%) + (face-to-face interview = 23,3%) and in one case the way stays unknown (that is 0.1%) [see MODE-variable in the Polish data file]

Sample size: 1277 = number of respondents achieved on ISSP 2003

Response rates:

2106	A - Total issued (total sample)
204	B - Ineligible (address vacant, wrong ages,...)
1902	C - (= A - B) Total eligible (in scope sample)
1277	D - Total ISSP questionnaires received
625	E - (= C - D; = F + G + H) Total non-response
218	F - Refusals (refusing to take part)
325	G - Non-contact (never contacted)
82	H - Other non-response

Language: Polish

Weighted: YES

Weighting procedure: Weighting procedure assumes that after weighting the sample size is equal to the number of completed interviews.

weight: $$W1_{is} = \frac{r_{is}}{\sum_{i=1}^{n} r_{is}} * n$$

where:

i – record ID , i=1,2,.....n

n – the number of completed questionnaires

N – the number of inhabitants who are 18 or older.

r_{is} - completion rate in the class of place of living s where the i interview was conducted.

$$r_{is} \frac{LW_s}{LZR_s}$$

LW_s - sample size drawn in the class of the place of living s, proportional allocation assumed

LZR_s - number of completed interviews in the class of the place of living s

s – class of the place of living (s=1,2,….,6)

s=1 - village

s=2 – cities up to 19999 inhabitants

s=3 – cities 20000-49999 inhabitants
s=4 – cities 50000-99999 inhabitants
s=5 – cities 100000-499999 inhabitants
s=6 – cities 500000 and more inhabitants

After stratification „ex post" for k-categories weights were calculated taking into consideration the structure of polled population on the basis of statistical data coming from the Central Statistical Office (GUS) in division for villages and cities, sex and age category.

$$W2_{i_k} = \frac{\left(\frac{X_k}{\sum_k X_k}\right) * 100}{\left(\frac{\sum_{i_k=1}^{n_k} W1_{is_k}}{\sum_{i=1}^{n} W1_{is}}\right) * 100}$$

$$\left(n = \sum_k n_k\right)$$

$$\left(n = \sum_{i=1}^{n} W1_{is}\right)$$

where:

X_k - number of people in k-category according to GUS data

$X = \sum_k X_k$

i_k - questionnaires by record ID which belong to the k-category

n_k - total number of questionnaires which are rated to k-category

$$WX_{isk} = W1_{is} * W2_{i_k}$$

WX_{isk} weight for i-respondent belonging to the k-category and drawn in s-class of the place of living.

Known systematic properties of the sample: No biases or other deviation of the sample (after weighting) (see: National Population Characteristics, 18 years or older; POLAND). You can observe in the National Population Characteristics for Poland some deviations in two highest age categories which is caused by different age grouping for men and women and used for weight calculation.

Deviations from ISSP not asked: V58 (question 14), and ETNIC (background question).

Study Description

Study Description: Portugal

Study title: Portuguese Social Attitudes 2003/2004

Fieldwork dates: April to September 2004

Principal investigators: Manuel Villaverde Cabral, Jorge Vala, Alice Ramos, all at Instituto de Ciências Sociais da Universidade de Lisboa.

Sample type: Stratified random probability. The sam ple is designed to be representative of adults aged 18 or over living in private accommodation in Portugal. The sam ple method involved a m ulti-stage design: stratification by re gion and habitat; Selection of sampling units (100); selection or streets: selection of addresses by random root; selection of individuals by the last birthday method.

Stratification factors used:

- NUTES (North, Center, Lisbon and Tagus Valley, Alentejo and Algarve)
- HABITAT (less than 2.000 hab.; 2 - 10 thousand hab; 10 - 30 thousand hab; 30 - 100 thousand hab; more than 100 thousand hab)

In order to get a representative sample, near 50% of the interviews were made in habitats with less than 2000hab. Some problems came up, such us, a level of non-responses and refusals higher than expected.

Fieldwork institute: TNS-Euroteste

Fieldwork methods: face-to-face interview with visuals

Context of ISSP Questionnaire: Atitudes Sociais dos Portugueses (*Portuguese Social Attitudes)*

Response rates:

2907	A - Total issued (total sample)
145	B - Ineligible (address vacant, wrong ages,...)
2762	C - (= A - B) Total eligible (in scope sample)
1602	D - Total ISSP questionnaires received
1160	E - (= C - D; = F + G + H) Total non-response
955	F - Refusals (refusing to take part)
200	G - Non-contact (never contacted)
5	H - Other non-response

Language: Slovak and Hungarian languages

Weighted: Yes

Russia
ISSP 2003 – National Identity II
Study Description

Study Description: Russia

Study title: 'ISSP-2003 Module "National Identity II"

Fieldwork dates: July,01.-15,2003

Principal investigators: L.Khakhulina, Levada-Center

Sample type: Description of the sampling procedure

Stratification procedure. Nationwide sample (N=2100) was divided among:

a) 10 large economico-geographical macro regions proportionate to the size of the local population aged 16+ of each macro region
b) 5 strata of rural districts and urban settlements* in each of 10 macro regions proportionate to the size of the local population aged 16+ of each stratum.

* 1)less than 10,000; (rural districts & small urban settlements)
2)from 10,000 – to100,000;
3)from 100,000 – to 500,000;
4)from 500,000 – to 750,000;
5)over 750,000 inhabitants

Selection primary sampling units (PSUs). All cities over 500, 000 inhabitants were included in the sample as self-representative units. Urban and rural settlements were considered as primary sample units (PSUs). In each stratum (except strata of cities over 500,000 and 2 capital cities) the number of PSUs was calculated on the limitation of 15 interviews per PSU and the PSUs as well were selected with the probability to its sizes (the number of its inhabitants). The total numbers of interviews accounted for a stratum was distributed approximately equally among selected PSUs. **Totally 101 PSUs were selected.**

Selection of secondary sampling points (SSUs). Electoral districts were used as secondary sampling points In the cities over 500,000 inhabitants the number of surveyed SSUs was defined by condition of 7 interviews per SSU.. In the rest of selected PSU two sampling points were randomly selected from the list of all electoral districts of this PSU.

Totally 240 sample points were selected.

Selection of households. The households were selected by a random route method. If a household or a respondent refused to participate in the survey or not been achieved for 4 visits an interviewer should visit the next address from the rout in the selected districts.

Selection of respondents. Within a household a member with the nearest birthday was selected for interviewing. In order to reach a selected respondent an interviewer visited each address up to 3 times in different days of a week and at different time of a day.

The following categories were excluded from the gross sample:

a)persons doing their military service by draft (about 1%)
b) persons under imprisonment (about 0,8%)
c)population of the areas under the war conflict in North Caucasus (1,9%)
d) population of remote or difficult to access regions of Far North (0,9)
e) rural localities with less then 50 inhabitants (0,8%)

Fieldwork institute: Levada-Center

Fieldwork methods: Self-completion
Sample size: N=2400(2100 + 300 extra sample in Moscow)

Response rates:

5902	A - Total issued (total sample)
182	B - Ineligible (address vacant, wrong ages,...)
5720	C - (= A - B) Total eligible (in scope sample)
2408	D - Total ISSP questionnaires received
3367	E - (= C - D; = F + G + H) Total non-response
1653	F - Refusals (refusing to take part)
1328	G - Non-contact (never contacted)
331	H - Other non-response

Language: Russian
Weighted: yes, a weighting factor exists in the data set
Weighting procedure: exact description of the weighting procedure / algorithm

a) Main principles of weighting procedure

The total expected number N of respondents for a certain region being treated equal

N = N0 * P ,

where N0 denotes the size of total sample, P - the share of the region population in the entire population.

As a result of correction, every respondent X[k] has the definite weight W[k], within the lim its 0 < W[k] < ~10 , so that the following conditions were valid :

1)the value of sum(W[k]) for the region concerned was equal to N
2)for every controlled group G[i] the value Q[i] being equal to
Q[i] = sum(W[k] | X[k].belong to G[i]) / N,
was closed to a proportion P[i] of group G[i] in the region population

i.e. Q[i] ~ P[i], i=1,2,...,16.
The value of J
being equal to J = sum((Q[i]-P[i])**2) + (sum(W[k])/N - 1)**2 ,
was used as the criterion for minimization on the weights` sets variety.

Slovak Republic
ISSP 2003 – National Identity II
Study Description

Study Description: **Slovakian Republic**

Study title: ISSP Identity 2003

Fieldwork dates: April 20 – May 17, 2004

Principal investigators: Comenius university in Bratislava, Department of Sociology (Slovakia)

Sample type: Three stage stratified probability sampling:
1. Stratified probability sampling of election districts
2. Probability sampling of households in selected districts
3. Sampling of household members based on nearest birth-date

Fieldwork institute: ASA, s.r.o, Palisády 26, 811 06 Bratislava, Slovakia

Fieldwork methods: Interview face to face

Sample size: 1152

Response rates:

1475	A - Total issued (total sample)
16	B - Ineligible (address vacant, wrong ages,...)
1459	C - (= A - B) Total eligible (in scope sample)
1152	D - Total ISSP questionnaires received
307	E - (= C - D; = F + G + H) Total non-response
307	F - Refusals (refusing to take part)
	G - Non-contact (never contacted)
	H - Other non-response

Language: Slovak and Hungarian languages

Weighted: Yes

Weighting procedure: Total weight is constructed from stratification weights based on sex, education and age.
The weights were derived from data of Slovak Statistical Office (Census 2001)

Known systematic properties of the sample: Due to response differences the basic socio-demographic characteristics – sex and level of education – are significantly different from the known population characteristics. The problem was corrected by the post-stratification weights (see above).

Deviations from ISSP questionnaire: 22 questions were added in the questionnaire – answers are not included in the data-file sent to the archive.

Slovenia
ISSP 2003 – National Identity II
Study Description

Study Description: Slovenia

Study title: Slovene Public Opinion Survey 2003/2: International Survey on Family and National Identity and Attitudes on Local Democracy

Fieldwork dates: February 2003 – March 2003

Principal investigators: Niko Toš, Public Opinion and Mass Communication Research Centre (CJMMK), Ljubljana.

Sample type: Universe: The adult residents of SR Slovenia, older then 18 years, living on permanent address. Excluded: Institutionalised people. Central Register of Population (a list of names and addresses constantly undated by public administration) is employed as a sampling frame. Sampling procedure: The sample is two-stage stratified random sample from Central Register of Population , where every population unit has equal probability of selection. First stage PSU selection is made by probability proportional to size of CEA (Clusters of Enumeration Areas). CEA are stratified according to 12 regions*6 type of settlement. At second stage systematic random selection inside CEA brings fixed numbers of persons with name and address. Spilit-halves samples were used for parallel SJM surveys.

Fieldwork methods: Personal interviews with trained interviewers

Fieldwork institute: Public Opinion and Mass Communication Research Centre (CJMMK), Ljubljana

Context of ISSP-questionnaire: ISSP 2002 questionnaire lie at the beginning of the SJM 2003/2 questionnaire. Then follows the ISSP 2003.

Sample size: 1093

Response rates:

South Africa
ISSP 2003 – National Identity II
Study Description

Study Description: **South-Africa**

Study title: 'official' title of the study/survey
South African Social Attitude Survey

Fieldwork dates: start and end date of field-work
August-September 2003

Principal investigators: Dr Stephen Rule
Human Sciences Research Council

Sample type: description of the sampling procedure
A sample of 3 500 respondents was selected throughout South Africa in groupings of seven and situated in 500 census enumerator areas (EAs) as determined in the 2001 census. Each EA was classified in terms of the dominant lifestyle category by the Human Sciences Research Council (HSRC) in its analysis of the 1996 census data. In order to ensure adequate representation in the sample from each province and from each of the four dominant population groups, the sample was stratified by province and by population group. Disproportionately large samples were selected from areas know to be inhabited by the two smallest components of the population, namely (i) areas with dominantly Indian populations and (ii) the Northern Cape. Within the EAs, the seven households were randomly selected and within the household, the respondent were selected using a Kish grid.

Fieldwork institute: Human Sciences Research Council

Fieldwork methods: Face-to-face

Sample size: number of respondents in the final ISSP file

Response rates:

3500	A - Total issued (total sample)
277	B - Ineligible (address vacant, wrong ages,...)
3223	C - (= A - B) Total eligible (in scope sample)
2483	D - Total ISSP questionnaires received
740	E - (= C - D; = F + G + H) Total non-response
362	F - Refusals (refusing to take part)
334	G - Non-contact (never contacted)
44	H - Other non-response

Language: English, Afrikaans, Tswana, Xhosa, Venda, Zulu

Weighted: Yes

Weighting procedure: Basic sampling weight bas3d on SAS Procedure Survey Select

	compensating for unit non-response by dividing the sampling weights by the response rate per EA.
Known systematic properties of the sample:	Disproportionately large samples were selected from areas know to be inhabited by the two smallest components of the population, namely (i) areas with dominantly Indian populations and (ii) the Northern Cape
Deviations from ISSP questionnaire:	Q 6b ; Q7b o ; Q10 ; Q11 ; Q13 Ommitted due to difficult phrasing and confusion with concept of immigrants

Sweden
ISSP 2003 – National Identity II
Study Description

Study Description: **Sweden**

Study title: National Identity II

Fieldwork dates: February 2003 to April 2003

Principal investigators: Prof. Stefan Svallfors and Dr.Lonas Edlund, Department of Sociology, Umeå University, Umeå, Sweden

Sample type: Two representative samples of the Swedish population 17-79 years. The samples were subjected to different fieldwork methods, with obvious implications for the response rate.

Fieldwork institute: SIFO

Fieldwork methods: Separate postal survey with several reminders.
Sample 1 received an introductory letter and a gift. The gift was free and was not associated with any obligations.
See the below table for a detailed description.
The samples can be separated by using the variable: S_MODE

Fieldwork details

		Sample 1	**Sample 2**
29/1	Introductory letter about the survey	X	
3/2	Postal survey		X
4/2	Postal survey + lottery ticket	X	
10/2	Postal reminder		X
11/2	Postal reminder + questionnaire	X	
24/2	Postal reminder + questionnaire		X
25/2	Postal reminder + questionnaire	X	
14/3	Postal reminder (+ questionnaire to those with unknown telephone numbers)	X	
17-27/3	Reminder by telephone		X
17-31/3	Reminder by telephone (+ questionnaire to those wishing a questionnaire)	X	

Context of ISSP questionnaire: Separate survey

Language: Swedish

Weighted: No

Sample size: 1186

Known bias in data The response patterns for all variables have been subjected to χ^2 tests in order to track significant differences between samples 1 and 2 (not controlling for demographic differences). Differences in response patterns between the two samples are generally small. For all variables: $p > 0.10$, except v17 ($p=0.01$) and v39 ($p=0.07$).

Response rates in different demographic groupings are relatively

evenly distributed. However, the following may be noted: women and the young (higher than average response rate); men, the elderly, those living in Stockholm (lower than average response rate).

Special note on background variables referring to occupation

1. All occupational variables refer to the respondent's present or (if the respondent is currently not working) last occupation.
2. ISCO. 4-digit. Where information for 4-digit coding is not available, 3- or 2-digit codings have been applied, using zeros for the missing digits. Examples: isco code 733 is coded as 7330 in the datafile, isco code 73 is coded as 7300 in the datafile.

Switzerland
ISSP 2003 – National Identity II
Study Description

Study Description: **Switzerland**

Study title: ISSP 2003 National Identity'

Fieldwork dates: May the 6th 2002 until August the 25th 2003

Principal investigators: Institut SIDOS, Ruelle Vaucher 13, CH-2000 Neuchâtel

Sample type: The ISSP 2003 survey was combined with the „Eurobarometer in Switzerland“ (EBCH) survey. The questions related to the „Eurobarometer in Switzerland“ were first asked followed by those of the ISSP 2003 using the CAPI method. The sampling procedure was the following:

- Stratification of the households into 6 regions (Espace Mittelland, North of Switzerland, East of Switzerland, Center of Switzerland and Italian-speaking part of Switzerland)
- Random selection of households from the extended phone register
- Sending of an information letter
- One half of the sample was contacted by the telephone central of the fieldwork institute and the other half per telephone or face to face from the interviewer to fix a date for the interview
- Random selection of one person in each household with the KISH method
- EBCH and ISSP Interview (CAPI)

Fieldwork institute: MIS Trend, Institut pour l’étude des marchés et les sondages d’opinion, Pont-Bessières 3, 1005 Lausanne

Fieldwork methods: CAPI

Sample size: 1037

Response rates:

	A - 3640 (total sample)
	B - 497 (address vacant, wrong ages, sick, language,...)
	C - (= A - B) 3143 (in scope sample)
	D - 1037
	E - (= C - D; = F + G + H) 2106
	F - 1735 (refusing to take part)
	G - 224 (never contacted)
	H - 147

Language: German, French and Italian

Weighted: yes

Weighting procedure: The weights were defined according to the following criteria:
- Size of household
- Age
- Gender
- Language
- Employment status

The estimation of size of household, age, gender, language is based on the Swiss federal census 2000 and the estimation of the employment status on the Swiss Labour Force Survey 2002.

The size of the household was recoded into the following four categories:
1) Household with 1 person
2) Household with 2 persons
3) Household with 3 persons
4) Household with 4 persons and more

The age was recoded into the following six categories:
1) 18-24 years
2) 25-34 years
3) 35-44 years
4) 45-54 years
5) 55-64 years
6) 65 and older

The language was recoded into the following five categories:
1) German
2) French
3) Italian
4) Rheto-roman
5) Other

The employment status was recoded into the following two categories:
1) Active
2) Non active

The weights result from the division of the expected through the observed value. This process was repeated until convergence.

Known systematic properties of the sample: Under representation of young people and over representation of german speaking people.

Deviations from ISSP questionnaire: None

Publications: -

Taiwan
ISSP 2003 – National Identity II
Study Description

Study Description: Taiwan

Study title: Taiwan Social Change Survey: the Fourth Survey of the Fourth Cycle
Fieldwork dates: 08/10/2003~for about one month
Principal investigators: Chang, Ying-hwa
Institute of Sociology, Academia Sinica
Sample type: Three-stage Stratified PPS Sampling
(1) PSU=township, (2) Li (administrative unit under township, (3) respondent
Fieldwork institute: Center for Survey Research, Academia Sinica
Fieldwork methods Face-to-face interview
Sample size: 2016

Response rates:

4391	A - Total issued (total sample)
138	B - Ineligible (address vacant, wrong ages,...)
4253	C - (= A - B) Total eligible (in scope sample)
2016	D - Total ISSP questionnaires received
2237	E - (= C - D; = F + G + H) Total non-response
594	F - Refusals (refusing to take part)
56	G - Non-contact (never contacted)
1587	H - Other non-response

Language: Manderin, Taiwanese, or Hakka
Weighted: no
Weighting procedure:
Known systematic properties of the sample: A non-response bias comes from the use of household registration data in which some household members in fact do not live in the household.
Deviations from ISSP questionnaire: Some variables are not included in the data˜

Uruguay
ISSP 2003 – National Identity II
Study Description

Study Description: Uruguay

Study title: National Identity - (ISSP 2003 Module)

Fieldwork dates: From July 12 to August 16, 2004

Principal investigators: Zuleika Ferre, Giorgina Piani, Máximo Rossi from Department of Economics and Juan José Goyeneche, Guillermo Zoppolo from Institute of Statistics from University of Uruguay

Sample type: The sampling frame used was the 1996 Population Census. The Universe population are adults (18 year-old or more) that reside in Urban areas.

The design is stratified multistage. Two major regions are represented: Montevideo Metropolitan Area (strata 1-7) and Urban population in the rest of the Country (5000 or more inhabitants cities, strata 11-13).

In strata 1 to 7, Census Zones (usually one block) are selected by a systematic proportional to size (pps) scheme ("size" being the number of people on each block), then four households are selected on each block, and one person per household is selected via the "next birthday" rule.

In strata 11 to 13, four cities are selected per stratum via systematic pps sampling. Size again being number of people residing on each city. Census Zones, households and persons are selected in the same way as in strata 1 to 7.

Sample allocation:

Table 1

Stratum	Population	Sample
1	224.396	96
2	367.513	156
3	428.118	184
4	286.499	120
5	78.576	32
6	191.474	80
7	21.368	12
11	349.935	144
12	325.190	144
13	317.427	140
Total	2.590.496	1.108

Fieldwork institute: Department of Economics – Faculty of Social Sciences, University of Uruguay

Fieldwork methods: Face to face interviews

Context of ISSP questionnaire: The National Identity 2003 module was carried out in conjunction with de Citizenship 2004 module.

The questionnaire was structured as follows: firstly, the Citizenship module, the National Identity module, and finally, demographic variables.

Sample size: 1108

Response rates:

CONCEPT	Total
A - Total issued (total sample)	1389
B - Ineligible (address vacant, wrong ages,...)	0
C - (= A - B) Total eligible (in scope sample)	1389
D – Total ISSP questionnaires received	1108
E - (= C - D; = F + G + H) Total non-response	281
F - Refusals (refusing to take part)	176
G - Non-contact (never contacted)	72
H - Other non-response (incomplete questionnaires)	33

Language: Spanish

Weighted: The data submitted are not weighted

Weighting procedure: The weight is computed as the inverse of the selection probability for each person. The steps concerning the household selection are done with pps sampling, so the household weights are equal to number of households on stratum divided by the number of households selected on each stratum. The household weight is then expanded by the person weight, which corresponds to the number of adults on the household. On some households the number of adults goes up to 10, as a conservative measure we reduced these weights considering a maximum number of 5 for the person weight. Since we estimated the number of household per stratum, we finally adjusted the weights in order to match the number of people per stratum that appear on the previous table 1.

Known systematic properties of the sample: None that we are aware.

Deviations from ISSP questionnaire: The questionnaire was translated as closely as possible from English to Spanish, maintaining the meaning and significance of each sentence and word.

Some general comments:

- In questions V58: we opened this question in v58_a and v58_b. The reason for that was: in Uruguay commonly family are formed with people from different countries (mainly from Spain and Italy)

- **DEMOGRAPHICS VARIABLES:**
  - UNION: The code 2 was not included.
  - INCOME and RINCOME: In these questions, incomes were measured in categories and we coded them.
  - URBRURAL: It was not self assessement. Was coded by the field supervisor.

The value labels for UY_DEGR, INCOME, RINCOME, UY_PRTY, UY_REG AND UY_SIZE are:

USA
ISSP 2003 – National Identity II
Study Description

Study Description: **USA**

Study title: General Social Survey - National Identity

Fieldwork dates: 8/05-12/05

Principal investigators: Tom W. Smith and James A. Davis, NORC/University of Chicago and Peter V. Marsden, Harvard University

Sample type: Multi-stage, area probability sample

Fieldwork institute: NORC

Fieldwork methods: In-person with self-completion on laptop of ISSP module

Sample size: 1216
Please see revised table of response rates (version 2.0)

Response rates:

2777	A - Total issued (total sample)
553	B - Ineligible (address vacant, wrong ages,...)
2224	C - (= A - B) Total eligible (in scope sample)
1216	D - Total ISSP questionnaires received
	E - (= C - D; = F + G + H) Total non-response
727	F - Refusals (refusing to take part)
49	G - Non-contact (never contacted)
232	H - Other non-response

Language: English

Weighted: Yes

Weighting procedure: the weight takes into consideration three factors: 1) a sub-sampling of temporray, non-response cases, 2) differential final non-response by area, and 3) number of adults in the household to make representative of individuals rather than households

Known systematic properties of the sample: Men and resdients of large central cities ar eunderrepresented due to higher nonresponse in the unweighted data

Deviations from ISSP questionnaire: None

Venezuela
ISSP 2003 – National Identity II
Study Description

Study Description: **Venezuela**

Study title: General Social Survey - National Identity

Fieldwork dates: 22-3-2004 to 08-04-2004

Principal investigators: Roberto Briceño León

Sample type: The stratification variable used was the political and administrative division consisting of 23 states. But 2 states (Amazonas and Delta Amacuro with lesser population) were joined together, so that there was 22 instead of 23 strata.
The sampling frame was the list of censal segments used to carry out the XIII Venezuelan National Census. It included demographic and mapping information prepared by the National Institute of Statistics (Instituto Nacional de Estadística) for the 2001 census.
The sampling method was carried out in three satges. In the first stage we selected censal segments from each stratum with proportional probability to their number of dwellings
In the second stage were selected two "blocks" from each censal segment using a systematic geographical order selection technique with a random start. The selection of blocks was with probability proportional to the number of dwellings in each block.
Finally a person was selected according to a quota by sex and age. Five persons were selected from each block with one person selected from each household. The start in each block to get the first dwelling was random.
The quota was established using sex and age groups accordingly to the national distribution of people by sex and age revealed in the 2001 National Census

Fieldwork institute: Laboratorio de Ciencias Sociales, LACSO

Fieldwork methods: Face to face personal interview

Sample size: 1199

Response rates:

1337	A - Total issued (total sample)
43	B - Ineligible (address vacant, wrong ages,...)
1294	C - (= A - B) Total eligible (in scope sample)
1199	D - Total ISSP questionnaires received
95	E - (= C - D; = F + G + H) Total non-response
54	F – Refusals (refusing to take part)
29	G - Non-contact (never contacted)
12	H - Other non-response

Language:	Spanish
Weighted:	Yes
Weighting procedure:	Post-stratification was carried out by standard of living groups (slg), based on similar previous studies. Final sample weights were adjusted by a factor obtained using the next equation: Fe = Expected % slg "e" / observed % slg "e"
Known systematic properties of the sample:	The isolated indigenous population living in the Amazon (Yanomami, Warao, etc) was excluded, but they represented less than 1% of total population. There were limitations reaching people from High Class areas.
Deviations from ISSP questionnaire:	None
Publications:	None
